Revolutionary development of motor protection relays

Complete motor protection is realized
with real time data processing and high precision.

DMPi Series

Intelligent Digital Motor Protection Relays

- Definite/Inverse time option and various protection methods
- Storage of failure causes
- Separated display part using cables
- MODBUS communication, 4~20mA DC output
- Operating time displayed for each model

Note) 1. It is possible to set up ground fault and instantaenous trip contacts separately.

Product characteristics

Convenience

Integrated Digital Motor Protection Relay based on MCU(Microprocessor Control Unit)
Real Time Processing and High Precision are implemented.

Applicable to invertor circuits
It may be applied to the secondary inverter control circuit with its outstanding resistance to harmonic noise.
Permissible frequency range is 10~200Hz. When the percentage of harmonic is more than 30%,
a harmonic filter is installed. (However, the ground fault protection function should be switched off.)

Function to store the cause(s) of failure / Fault
Up to 5 motor failure events may be saved in the system, so that the failure history can be easily identified.

Up to 5 motor failure events may be saved in the system, so that the failure history can be easily identified.
The display part is separated and attached to the front panel, so that information on current/operating time and
setup can be viewed without taking out the unit. With the separated display, motor protection can be performed.

Communication function
General-purpose RS485/MODBUS communication mode is offered for various system and communication
network configurations. Models with analog current signal (4~20mA DC) output are compatible with systems that
uses the existing TD (Transducer).

A wide range of reset functions
Manual/Automatic/Electrical reset functions are provided for user convenience.

Date information display
When a failure occurs, the date and time of failure occurrence are saved in the system to accurately identify
the date of motor failure.

Password setting
When changing the set values, a password must be inserted.

Total operating time and operating time setting
When the predefined operating time has elapsed, related information is displayed so that operators may replace
the motor bearing and check the refueling cycle.

Terminal/Penetrated types are shared for application in various installation environments
Terminal blocks are detachable, which makes them applied to various installation environments.

Reliability

Thermal Inverse Time, Inverse Time and Definite Time Modes
According to user's needs, the motor can be protected in the inverse time mode or definite time mode.

Three-phase digital ampere-meter
Three-phase current is displayed in cycle at intervals of 2 seconds for operators to check the motor state.

Various protection elements and additional functions
Single/3-phase is optional, and output contact as well as the operating time can be set.
Free Voltage power connection (AC/D85~260V) is possible with ZCT built-in option.

High Reliability
The current relay error is reduced from 5% to 3% and the minimum sensible current is lowered from 70% to 30%
of the minimum rating. Phase fail/phase unbalance protection relay correction and delay time can be set.

Inverse time characteristic good for motor protection
Thanks to the inverse time characteristic in which a running time is determined by a size of overcurrent,
the equipment is excellent at motor protection.

Product characteristics

Protection functions

Over current. Overload

Considering the start-up time of a motor and based on 600% of the rated current, operating time is set by 1sec unit ranging from 1 to 60 seconds to establish an overload characteristic curve (Class 1~60). When a definite time characteristic is chosen, overcurrent is detected from the set operating delay time (D-Time) regardless of the quantity of heat generated from the motor. Then, Trip is generated when overcurrent continues, exceeding the operating time (O-Time).

Stall/Locked rotor

It is a function to prevent burning caused by locked rotor, startup failure and startup delay. When the level of load current increases due to overheating and overcurrent during operation or when the load torque exceeds the motor torque, such failure is detected to break the related circuits.

Phase fail/Phase unbalance

When phase fail occurs, a motor may not start to operate and the motor under operation will stop owing to the lack of torque or reverse phase current will continue to flow, generating heat. DMPi calculates the unbalance of three-phase current and when it reaches 100%, it operates at 3sec as phase fail. It can be set for tripping at 5sec when the phase unbalance in within 10~90%.

*Delay time may be set within the range of 0~200sec so that it does not function upon startup.

Reverse phase

It is a function to prevent reversing of a motor. The phase difference of three-phase current is compared for operation within 0.1~1.0sec when the phase sequence has changed. Reverse phase is checked only upon motor startup.

Under current protection

This equipment is mainly used to monitor no-load status caused by the separation or damage of the drive shaft of a motor, or to protect the idle rotation (no-load) status of pump. It is possible to set up 30~70% of rated current. At the time of third second, it runs.

Ground fault

Ground fault leakage current is detected to prevent ground faults arising from electric leakage and secondary accidents (Phase faults and electric shock accidents). Current sensitivity and operating time are set differently according to the grounded system or purpose of protection. Current sensitivity can be set within the range of 30mA~3A and the operating time within the range of 0.05~5.0sec.

* Delay time may be set within the range of 0~200sec so that it does not function upon startup, and built-in ZCT is provided according to the Type.

Instance

It is a function to protect a motor from short-circuit current. It operates within 50ms when fault current of more than 500~1500% is generated. Delay time may be set within the range of 0~200sec so that it does not function upon startup.

Product characteristics

Analog (4~20mA) output function

Specifications

• The measured values of current for the maximum phase among the measured values of three-phase current are converted into DC 4~20mA and the measured values of current can be displayed with a digital meter in the distance.

• 20mA output setting: 0.5~6A or 5~65A

Note) 1. At the setting mode of 0.5~6A, the level of current is measured from 0.15A, so 0A is measured when less than 0.15A and the output value becomes 4mA. (When it is 0.15A, >4mA is actually measured.)
2. Measurement error based on temperature changes: ±0.15%/°C (Based on the room temperature of 25°C)

• Motor stop state: 4mA

• Setting value exceeding the rating: 20mA

• Load: Within 500Ω

Note) The allowable load of cables should be within 500Ω and the cables for shielding should be used considering the resistance of the received meta (Generally 250 Ω) and line resistance.

$$\text{Output current} \quad = \quad \frac{(I \text{ Upper Limit} - (I \text{ Lower limit})}{TD \text{ Setting value}} \times \text{Load current} + 4mA$$

$$= \quad \frac{16mA}{TD \text{ setting value}} \times \text{Load current} + 4mA$$
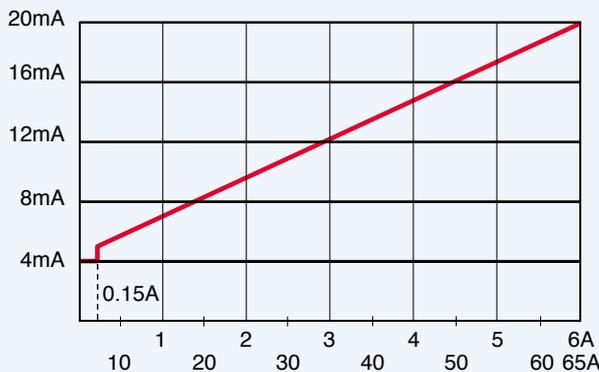

Analog output when output setting is 6A (65A)

Rated specifications

Connection method	Penetrated / Terminal type		
Protection functions	Overcurrent, phase fail, phase unbalance, stall, locked rotor,reverse phase, ground fault (Type option)Instance (Type option)		
Connection method	Penetrated / Terminaltype		
Operating time characteristics	Thermal heat build-up inverse time / Non-thermal heat build-up inverse time / Definite time		
Rated current	0.5~6A/5~65A(Rating option upon placing an order)		
Display	4 digit, 7-Segment		
Operating power	AC/DC 85~260V(50Hz/60Hz)		
Reset method	Automatic	1~20min (only for overcurrent)	
	Manual	(Electrical reset)	
Installation / Mounting method	Display can be installed separately, 35mm DIN rail / Screw installation		
Tolerance	Current	±3%	
	Time	±5%	
	4~20mA output	±5%	
Time setting	Startup delay	1~200sec	
	Operation delay	1~60sec	
Aux. contact	Composition	3-SPST(Power supply 1a1b, i nstantaneous operation 1a) Note1)	
	Capacity	3A/250VAC Resistive Load	
	Contact minimum load	100mA / 6VDC : (95-996, 97-98)	
		10mA / 5VDC (07-08)	
ZCT Input	External	200mA/100mV(Exclusive ZCT) Note2)	
	Built-in	Support (Separate connection unnecessary Note2)	
Service environment	Service temperature	-20°C ~ 60°C	
	Storage temperature	-30°C ~ 70°C	
	Relative humidity	Below 50% RH (Without condensation)	
Insulation resistance	100MΩ/500VDC		
Lightning impulse voltage	1.2X50us 5kV Prototype waveform supply		
Fast transient	2kV/1Min		
Power consumption	Below 2W		

Note 1. See No. 21 to 23 of A-Group in Setting menu If single phase is set, the device measures R/S/T phase. In HMI, the maximum phase of three phases is displayed without any indication of phase.

  2. It is used when zero current detection type is selected.

  3. This product is used to protect a low-voltage motor with 1000V or less

Model numbering system

DMP	06i	S	Z	I	M	12	2a1b

Rated current		Connection method		Ground fault		Additional function		Communication		Operating voltage	Auxiliary contact

Enter button

Type	Item		Description	Remarks
Display		R S T N	Display of R, S, T, or N phase	If fixed, flickering
		4 digit 7-segment	Display of a variety of information (numbers, text)	
		BAR GRAPH	Display of load factor (%) 50% ~ 120%	If 120% or more, flickering
		C	Display of communication status (C)	In communication, flickering
		%	Load factor (%) display unit	Depending on lighting status
		A	Current (A) display unit	Display of information
Button		TEST/RESET	Access TEST Mode and Release TRIP, Go to the top of menu	
		ENTER	Access Menu and Change & Save Setting Values	
		UP	Go to Items (Measurement Value, Group, Menu, Parameter Increase)	
		DOWN	Go to Items (Measurement Value, Group, Menu, Parameter Decrease)	

Operation & setting method

Before starting the motor, the following setting should be completed.

1. Check the test / Reset button.

1) First, check whether the connection method is appropriate. (Refer to the section on the connection method.)
2) Press the Test/Reset button once. 'Test' will be shown on the display and the device will be tripped.
3) When the Test/Reset button is pressed one more time during the device Trip, the display will be switched to the operating mode and the device will be reset for normal operation.

   Note) To prevent trip failures, the system is designed to prevent operation of the Test/Reset button when the motor is running.
   Note) Setup and setting values may change during the motor operation. Thus, please be cautious.

2. Setting method

1) Press Enter from the current display screen, and $A-9r$ will appear on the screen. Use the Up or Down button to choose a group that you want and press Enter to display a menu on the chosen group. Press the Test/Reset button again to return to the current display screen.

2) The first menu will be displayed in relation to the selected group. Use the Up or Down button to choose a menu that you want and press Enter. The screen on setting values will be displayed. Press the Test/Reset button to display the group selection mode

   Note) Start menu may vary according to the model specifications.

3) If you press the Up or Down button from the screen on setting values, $P-99$ will appear on the screen. Here, use the Up or Down button to change the value to P-00 and press Enter to return to the screen on setting values. The setting value will flicker and can be changed with the Up or Down button.
   After setting the value, press Enter. The value will be saved and the flicking values will be switched off.

4) With it switched on, press Enter to proceed to the next menu or press the Test/Reset button to go back to the previous menu. Related menus can be set with the same procedure.

   Note) Password insertion (P-00) is performed only once when changing the setting values. When no changes are made for 10 minutes, it can be re-inserted and changed.
   Note) With it switched on, press Enter to proceed to the next menu or press the Test/Reset button to go back to the previous menu. Related menus can be set with the same procedure.
   Note) When power is supplied for the first time or after power failure, the date information must be inserted at b-gr 4,S-d.

3. How to check the failure history

1) 1) Press the "Down + Up" buttons at the same time and the latest cause of a failure will be displayed on the screen. $I--$

   Note) When there is no failure history, it will be displayed as "non".

2) When saving more than 2 failure cases, use the Up or Down button to check any Event that you want. Then press Enter from the Event display to view the details on the failure causes.

   Note) There may be differences in details displayed according to the failure cause.
   Note) 5 causes of Trip in total are saved and when it exceeds 5 cases, the previous data are deleted for storage.

4. Operating time setting

1) B group $3.5rt$ is used for time setting (10~8,760). After the set operating time has elapsed, Trip state will be displayed with OrH. When A group $22.AL$ is set with OrH, 07-08 contact will be output.

5. Total operating time and operating time check

1) Total operating time can be checked from B group , $Itrt$ which is displayed in the following order: day/hour/minute.
2) Operating time can be checked from B group, $2r-t$ which is displayed in the following order: hour/minute.

   Note) When no current flows in the motor, the operating time will be displayed as 0.
   Note) The total operating time is saved every 10 minutes. When turned off, any value less than 10 minutes will be reset.

6. Heat quantity reset (The motor's heat quantity is reset by force to switch to the cold mode.)

1) When the operating characteristics of A Group 2.CHA are set in the thermal heat build-up mode (th)
2) When the Test/Reset key is pressed under overload trip to return and then a motor is driven right away, the motor will be hot. Thus, trip is immediately performed.
3) On the other hand, when the Enter + Test / Reset keys are pressed simultaneously under overcurrent trip to return and then a motor is driven right away, the motor will be cold. Thus, trip will be executed after the set time.

Operation & setting method

7. Three-phase current circulation display

1) Three-phase operating current that automatically circulates is displayed at intervals of 2 seconds.
2) To view a specific phase on the circulation display, press Enter in relation to such phase for 2 seconds. The phase will flicker and be displayed.
3) If you want to display the circulating three-phase current again, use the Up or Down key to cancel the state for circulation display.

Menu configuration

| Measuring | Group | Menu | Parameter |

Current Circulation Display
- Current R
- Current S
- Current T

※ It is displayed cyclically every 2 seconds. Cyclic display by key operation

※ Password window popup when changing

※ After saving, it lights after input
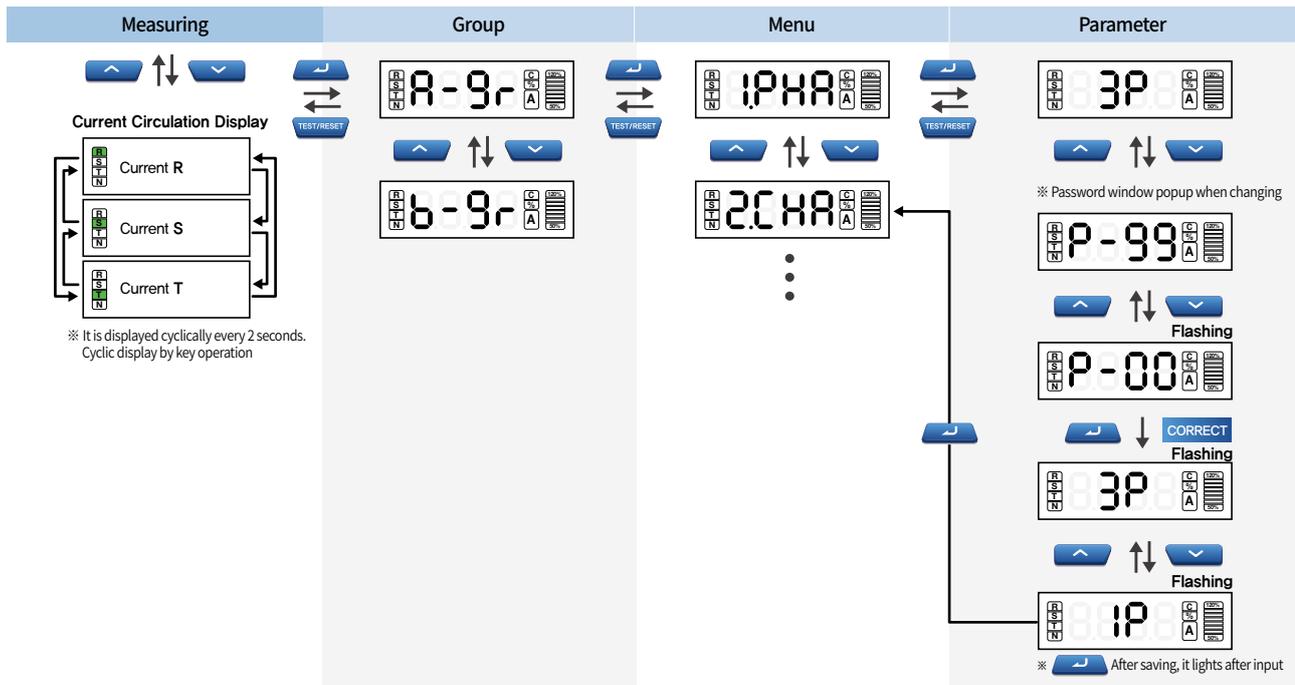

Information display

	Display information	Failure state	Additional display information	Remarks
Failure information	O-L	Overcurrent	Fault current (R-phase, S-phase and T-phase) Load factor, time	Operates at the set time
	Loc	Lock	Fault current (R-phase, S-phase and T-phase) Load factor, time	Operates within 0.5sec
	StL	Stall	Fault current (R-phase, S-phase and T-phase) Load factor, time	Operates in 3sec
	P-F	Phase fail	Fault current (R-phase, S-phase and T-phase) Load factor, time	Operates in 3sec (Delay time setting needed)
	P-U	Phase unbalance	R-phase, S-phase and T-phase, Unbalance factor, time	Ooperates in 5 sec (Delay time setting needed)
	r-P	Reverse phase	Time	Operates at the set time
	U-C	Under current	Fault current (R-phase, S-phase and T-phase) Load factor, time	Operates in 3sec
	9-F	Ground fault (ZCT)	Fault current (R-phase, S-phase and T-phase) N-phase, time	Operates at the set time (Delay time setting needed)
	Sho	Instance	Fault current (R-phase, S-phase and T-phase) Load factor, time	Operate within 50ms (Delay time setting needed)
Alarm information	OrH	Set operating time has elapsed	An alarm is displayed if a cumulative running time excesses a set running time	
Self-diagnosis information	L InE	Display communication error	When a communication error occurs between the display and body, please contact our office with the alarm maintained.	
	E.Err	External memory error	When there is an error in the backup memory, please contact our office with the alarm maintained.	

A-Group

Group	Display	Setting item	Setting value(Display value)	Single phase Note1)	Default	Remarks Note4)
A	`1.PHA`	Single phase/Three-phase	1P/3P	1P	3P	
	`2.CHA`	Operating characteristic (Overcurrent protection)	dEF/n-th/th Note2)	O	n-th	
	`3.0-t`	Operating time	1~60sec	O	60	
	`4.d-t`	Delay time	1~200sec	O	200	Displayed upon 2.CHA dEFT setting
	`5.r-C`	Rated current(6, 65)	0.5~6A/5~65A	O	6/65	Maximum rated current display (06i: 6A, 65i: 65A)
	`6.Ctr`	CT Ratio	0.25/0.5/1~200 Note3)	O	1	
	`7.Loc`	LOCK	Off/200~800%	O	Off	
	`8.StL`	STALL	Off/150~500%	O	Off	
	`9.P-F`	Phase fail(100%)	On/Off	-	On	
	`10.Pd`	Phase fail delay time	0~200	-	0	Displayed upon 9.P-F setting
	`11.PU`	Phase unbalance	Off/10~90%	-	Off	
	`12.Ud`	Phase unbalance delay time	0~200	-	0	Displayed upon 10.PU setting
	`13.rP`	Phase unbalance delay time	Off/On Note5)	-	Off	
	`14.rt`	Phase unbalance delay time	0.1~1.0	-	0.1	Displayed upon 13.rP setting
	`15.UC`	Phase unbalance delay time	Off/30~90%	O	Off	
	`16.9F`	Phase unbalance delay time	Off/0.03/0.05/0.1~3.0A	O	Off	
	`17.9t`	Phase unbalance delay time	0.05, 0.1~5.0sec	O	1	Displayed upon 16.gF setting
	`18.9d`	Phase unbalance delay time	0~200sec	O	200	Displayed upon 16.gF setting
	`19.IC`	Phase unbalance delay time	Off/500~1500% Note6)	O	Off	
	`20.Id`	Phase unbalance delay time	0~200	O	0	Displayed upon 19.IC setting
	`21.cS`	Phase unbalance delay time	2a, 1a1b, 2b	O	1a1b	
	`22.AL`	Phase unbalance delay time	I-tp, I-AL, ALo, U-C, OrH, g-F Note7)	O	I-tp	
	`23.Ar`	Phase unbalance delay time	On/60~110%	O	On	Displayed upon 22.AL Alo setting

Note) 1. When setting A group 1.PHA menu with 1P, restricted setting with limited functions can be made.
2. Operating characteristic th refers to the thermal heat build-up inverse time characteristic and n-th refers to the non-thermal heat build-up inverse time characteristic. When th is used, the quantity of heat generated will be reset as power is turned off. Thus, please pay attention to it.
3. CT Ratio is fixed to 1 for 65A Type model.
4. Some menus will not be displayed depending on the function setting for each model.
5. Reverse phase will be detected for only 1.5 seconds after load is activated. It is recommended to set as Off for a motor not in normal-reverse operation.
6. In case of 'Instance', the maximum setting value may change according to the rated current setting.
7. For models with ground fault and instance protection functions, the ground fault and instantaneous trip contacts may be separately set for use.

Operation & setting method

The output conditions of 95-96, 97-98 output contacts depending on the setting of A group 21.cS are as described below.

21.cS Setting		Output conditions	Contact output type	
			95–96	97–98
1a1b		Normal operation	NC Note)	NO Note)
		Ground fault / Short circuit	O Note)	C Note)
		Other failures, such as overcurrent, phase fail and reverse phase other than the ground fault	O	C
2a		Normal operation	NO	NO
		Ground fault/Short circuit	O	C
		Other failures, such as overcurrent, phase fail and reverse phase other than the ground fault	C	O
2b		Normal operation	NC	NC
		Ground fault/Short circuit	C	O
		Other failures, such as overcurrent, phase fail and reverse phase other than the ground fault	O	C

주) NC: Normal Close, NO: Normal Open, O: Open, C: Close

The output conditions of 07-08 output contacts depending on the setting of A group 22.AL are as described below.

23.Ar setting	Output conditions	Alarm output type	
		Motor operation	07–08
I-tp	Momentary current detected	Motor stop	C
I-AL	Momentary current detected	State maintained	C
U-C	Current flow below the set low current detected	State maintained	C
OrH	Output exceeding the set operating time	State maintained	C
g-F	Ground fault detection	Motor stop	C
ALo	Conforming to the 23.Ar setting described below		
23.Ar setting	**ALo setting from menu No.22**	**Motor operation**	**07–08**
On	Current flow exceeding the measured minimun current value detected Note)	State maintained	C
60~110%	Current flow exceeding the setting value	State maintained	C

Note) The measured minimum current value is 30% of the minimum rated current value (0.15A for 0.6i type; 1.5A for 65i type)

B-Group

Group	Display	Setting item	Setting value (Display value)	Single phase Note1)	Default	Remarks Note4)
B	1.t r t	Total operating time	0~9999day/0~23Time/0~59min	O	-	
	2.r - t	Operating time	0~9999 Time/0~59min	O	-	
	3.Sr t	Operating time setting	Off/10~8760	O	Off	
	4.S - d	Date setting Note2)	2017~2100yea/1~12month/1~31day/ 0~23hour/0~59min	O	2017.07.01 00:00	
	5.A - r	Automatic reset Note3)	Off/1~20min	O	Off	
	6.Adr	Communication network address	1~247	O	247	
	7.bPS	Communication speed	9.6k/19.2k/38.4k/56.7k	O	9.6k	Displayed only for M485 model
	8.S - P	Swap On/Off	On/Off	O	Off	
	9.P - r	Parity setting	nonE/odd/EUEn	O	nonE	
	6.t - d	20mA setting	0.5~6/5~65	O	6/65	Displayed only for A420 model

Note) 1. It can be set even when A group 1.PHA is set with the single phase (1P).
2. When power is supplied for the first time or after power failure, date must be set. For date setting, month, day, hour and minute should be respectively set for complete setting.
(After date setting, it is saved every 10 minutes. When power is supplied again after power failure, the date before such power failure will be saved.)
3. Automatic reset is restricted for overcurrent trip.
4. Menus vary according to the model. (refer to the remarks)

Phase setting

This is a function tdo set current input either as single or three-phase.

0.00	The DMPi main screen display (0.00A)
A-9r	1. Press Enter from the main screen. (A-gr)
1.PHR	2. Press Enter from the A-gr screen. (1. PHR)
3P	3. Press Enter from the PHR screen and the initial value 3P will be displayed.
P-99 **P-00**	4. Here, use the Up / Down key to display P-99 from the screen. Change it into P-00 with the Up/Down key and press Enter. You are now ready for setting. (Only required for initial setting)
1P	5. The set value flickers. Use the Up / Down key to display 'phase' that is applicable depending on the motor specifications (1P: single-phase; 3P: three-phase). Then, press Enter to save the setting. (1P) ① Choose either 1P or 3P; the default is 3P ② When 1P is selected, A group items such as "9.P-F", "10.Pd", "11.PU", "12.Ud", "13.rP" and "14.rt" are excluded from the setting menu.
	6. Press Test / Reset to return to the display screen.

Rated current setting

This is a function to set a rated current.

0.00	The DMPi main screen display (0.00A)
A-9r	1. Press Enter from the main screen. (A-gr)
1.PHR	2. Press Enter from the A-gr screen. (1. PHR)
5.r-C	3. Press the Up-key menu 3 or 4 times from the PHR screen. (5.r-C)
6.0	4. Press Enter from the 5.r-C screen and the initial value 6.0A will be displayed.
5.4	5. Here, use the Up / Down key to set the value as 0.5~6.0A. Then, press Enter to save the setting. Note1) (6.0➜5.4A) ① 6A model: Set by 0.1A unit ranging from 0.5A to 6A (the default is 6.0A) ② 65A model: Set by 1A unit ranging from 5A to 65A (the default is 65A)
	6. Press Test / Reset to return to the display screen.

Note 1) Upon initial setting, P-99 is displayed on the screen. Here, use the Up / Down key to change it into P-00 and press Enter. You are now ready for setting.

Operation & setting method

Overcurrent operating characteristic setting

This is a function to set the operating characteristic of the overcurrent element.
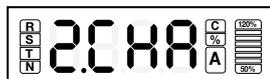

|	
0.00A	The DMPi main screen display (0.00A)
A-9r	1. Press Enter from the main screen. (A-gr)
1.PHA	2. Press Enter from the A-gr screen. (1. PHR)
2.CHA	3. Press the Up-key menu once from the PHR screen. (2.CHA)
n-th	4. Press Enter from the 2.CHA screen to display 'n-th' (initial value).
	5. The set value flickers. Use the Up / Down key to display the set value. Note1)
dEF	6. Press Enter for dEF setting. ① dEF (definite time), n-th (non-thermal heat build-up inverse time) or th (thermal heat build-up inverse time) ② When set as 'n-th' or 'th', "4.d-t" of the A group items is excluded from the setting menu.
	7. Press Test / Reset to return to the display screen.

Note 1) Upon initial setting, P-99 is displayed on the screen. Here, use the Up / Down key to change it into P-00 and press Enter. You are now ready for setting.

Overcurrent operating time setting

This is a function to set the operating time of the overcurrent element.

|	
0.00A	The DMPi main screen display (0.00A)
A-9r	1. Press Enter from the main screen. (A-gr)
1.PHA	2. Press Enter from the A-gr screen. (1. PHR)
3.0-t	3. Press the Up-key menu twice from the PHR screen. (3.O-t)
b0	4. Press Enter and the initial value 60sec will be displayed.
	5. Use the Up / Down key to display the set value on the screen. Note1)
30	6. Press Enter to set as 30sec. (60 ⇒ 30 sec)
	7. Press Test / Reset to return to the display screen.

Note 1) Upon initial setting, P-99 is displayed on the screen. Here, use the Up / Down key to change it into P-00 and press Enter. You are now ready for setting.

Overcurrent delay time setting

This menu is displayed only when the overcurrent operating characteristic is set as dEF (definite time).

|	
0.00 A	The DMPi main screen display (0.00A)
A-gr	1. Press Enter from the main screen. (A-gr)
1.PHA	2. Press Enter from the A-gr screen. (1. PHR)
4.d-t	3. Press the Up-key menu 3 times from the 1.PHR screen. (4.d-t)
200	4. Press Enter from the 4.d-t screen and the initial value 200 will be displayed.
	5. Use the Up/Down key to display the set value on the screen. Note1)
100	6. Press Enter to set as 100sec. (200➝100sec) ① Set by 1sec unit ranging from 1 sec to 200sec; the default is 200sec. ② When the overcurrent operating characteristic is set as 'n-th' or 'th', it is excluded from the setting menu.
	7. Press Test/Reset to return to the display screen.

Note 1) Upon initial setting, P-99 is displayed on the screen. Here, use the Up/Down key to change it into P-00 and press Enter. You are now ready for setting.

Ground fault operating value setting

This is a function to set the operating value of ground fault.

0.00 A	The DMPi main screen display (0.00A)
A-gr	1. Press Enter from the main screen. (A-gr)
1.PHA	2. Press Enter from the A-gr screen. (1. PHR)
16.9F	3. Press the Up-key menu from the 1.PHR screen to proceed to 16.gF.
OFF	4. Press Enter from the 16.gF screen and the initial value OFF will be displayed.
0.1	5. Here, use the Up/Down key to set the value. Press Enter to save the setting.Note1) (OFF➝0.1A) ① Set by 0.1A unit ranging from 0.1A to 3.0A; or OFF, 0.03A, or 0.05A. (the default is OFF)
	6. Press Test / Reset to return to the display screen.

Note 1) Upon initial setting, P-99 is displayed on the screen. Here, use the Up/Down key to change it into P-00 and press Enter. You are now ready for setting.

Operation & setting method

Ground fault operating time setting

This is a function to set the operating time of ground fault.

`0.00`	The DMPi main screen display (0.00A)
`A-9r`	1. Press Enter from the main screen. (A-gr)
`1.PHR`	2. Press Enter from the A-gr screen. (1. PHR)
`17.9t`	3. Press the Up-key menu from the 1.PHR screen to proceed to 17.gt
`1.0`	4. Press Enter from the 17.gt screen and the initial value 1.0sec will be displayed.
`0.1`	5. Here, use the Up / Down key to set the value. Press Enter to save the setting. Note1)(1.0➡0.1sec) ① Set by 0.1sec unit ranging from 0.1sec to 5.0sec; the default value is 1.0sec.
	6. Press Test / Reset to return to the display screen.

Note 1) Upon initial setting, P-99 is displayed on the screen. Here, use the Up/Down key to change it into P-00 and press Enter. You are now ready for setting.
Note 2) When the operating value of ground fault protection (16.gF) is set as OFF, it is excluded from the setting menu.

Ground fault delay time setting

This is a function to set time for blocking operation of the ground fault element upon motor activation.

|	
`0.00`	The DMPi main screen display (0.00A)
`A-9r`	1. Press Enter from the main screen. (A-gr)
`1.PHR`	2. Press Enter from the A-gr screen. (1. PHR)
`18.9d`	3. Press the Up-key menu from the 1.PHR screen to proceed to 18.gd.
`200`	4. Press Enter from the 18.gd screen and the initial value 200sec will be displayed.
`100`	5. Here, use the Up / Down key to set the value. Press Enter to save the setting. Note1) (200 ➡ 100sec) ① Set by 1sec unit ranging from 0sec to 200sec; the default value is 200sec.
	6. Press Test / Reset to return to the display screen.
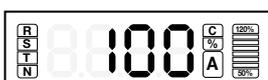

Note 1) Upon initial setting, P-99 is displayed on the screen. Here, use the Up/Down key to change it into P-00 and press Enter. You are now ready for setting.
Note 2) When the operating value of ground fault protection (16.gF) is set as OFF, it is excluded from the setting menu.

Terminal configuration
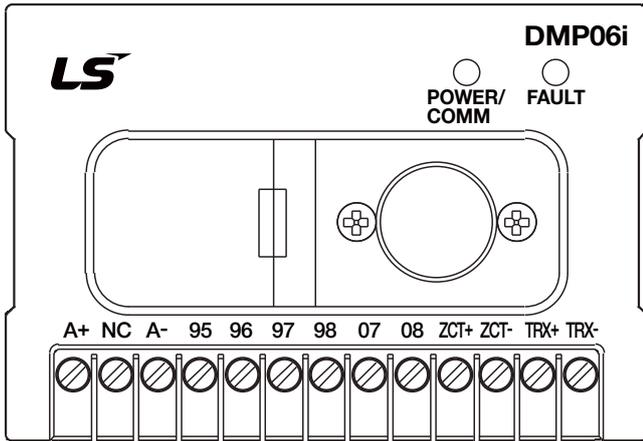

Engrave	Description
A+, A-	Input terminal for operation power
95-96	When the power is ON (NC contact output)
97-98	When the power is ON (NO contact output)
07-08	Alarm contact output terminal
ZCT+, ZCT-	ZCT output connection
TRX+, TRX- 420+, 420-	RS485 connect or 4~20mA output

		GMP80-3SR	●	●	●	●	●	-	-	Inverse time

Note) 1. Direct coupling type (Pin) supports direct coupling of Metasol MC. With your order, it is required to describe "Sol".
2. For GMP60-3TZ/3TZR, use ZCT (100mA/40~55mV) for EMPR only.
3. In case of GMP60-3S Series, it is required to purchase a terminal block separately.
4. This product is designed for protecting a low-voltage motor with 1,000V or less. Therefore, it should not be used in high voltage lines.

Convenience

Integrated Digital Motor Protection Relay using MCU(Microprocessor Control Unit)
It offers real time data processing and high precision.

Applicable to invertor circuits
It may be applied to the secondary inverter control circuit with its outstanding resistance to harmonic noise.
(Usable frequency range: 20~200Hz, except for phase reversal model)

Save the last fault cause
At the time of power recover after power failure, it is possible to check the final operation cause.
(Test/Reset Key 2-time operation)Limited to GMP60-3T Series only

Sharing of terminal contact type and penetration type
It is possible to detach and attach a terminal block and conveniently apply the product to a variety of installation conditions.

Perfect connection with LS Digital Contactor Metasol MC

EMPR	Contactor model
GMP22-2P/3P/3PR	MC-9b, MC-12b, MC-18b, MC-22
GMP40-2P/3P/3PR	MC-32a, MC-40a

*In case of Metasol MC direct coupling type, it is required to describe "Sol" with your order.
*GMP80-Model is unable to direct-couple to Metasol MC.

Various Installation Ways
With the uses of screws and brackets for DIN-Rail, it is possible to install 35mm DIN-Rail.

Wide Current Control Range
Since this product has a wide current control range, it is more convenient than thermal overload relays.

Reliability

Acquired S-Mark (safety certification) first in the industry
What is S-Mark (safety)?
S-Mark is used to approve a product's safety, reliability, and safe design manufacturing in the way of reviewing the quality management system of its manufacturer.
If a product complies with safety certification standards, it has safety certification (S-Mark). 'S-Mark (see Mark)' is applied to a product, a product package, or a product advertisement in order to show its safety.

Remarkable improvement in the characteristics of Nois
• This product solves the malfunction made by electromagnetic waves and surges which are the biggest problem of digital motor protection relays.
• With the application of highly-reliable Toroidal CT, the product safely protects digital contactors, radio devices, lightning surges, impulses, etc. against external influence.

Inverse time characteristic good for motor protection
Thanks to the inverse time characteristic in which a running time is determined by a size of overcurrent, the product is excellent at motor protection.

GMP22-2P, 2PD 1c

GMP22-2P(1c)
GMP22-2PD(1c)

Specification (Direct type EMPR)

Connection: Accessible electronic contactors	Minimum direct connection with width 44mm : MC-9b, 12b, 18b, 22b
Auxiliary contact	1SPDT 1c (N type) note1)
Current setting range	0.3~1.5/1~5/4.4~22A
Operating time characteristics	Inverse time, Definite time (PD)
Number of built-in CT (deflector)	2 (R, T phase)
Operating power	AC 110/220V (±10%)
Return (reset) method/time	Manual/Electrical return
Using Inverter Secondary	Available

			4.4 - 22A	GMP22-2PD(1c) 22A [R]

Note) 1. 1c contacts have two types of products: N-type (Fail Safe/Normal Energyed) and R-type(Non Fail Safe / Normal De-Energyed). In terms of product reliability, N-type (Fail Safe) product is recommended to be used.
2. The product detects phase failure of the phase (R, T) connected with two CTs in order for protection.

Technical information

Installation	Direct connection to contactors (not alone)
Tolerance	Current : ±5% Time : ±5% (or±0.5sec)
Frequency	50/60Hz
Aux. contact Ratings	5A/250VAC Resistive load
Insulation resistance	Min 100MΩ at 500Vdc
Lightning impulse voltage	1.2×50µs 5kV With standard waveform (IEC1000-4-5)
Fast Transient Burst	2kV/5min (IEC1000-4-4)
Environment	Operation : -25~70°C Storage : -30~80°C Relative humidity : 30~90%RH(No freezing)
Trip indicator	Red LED
Application specification	UL508, IEC60947-1

Model numbering

Test / Reset button

Operation time adjustment dial
0~30sec (Class 5-10-20-30)
Set the operating time of inverse time characteristic
Set time is the trip time at 6 x set current

*GMP22/40-2PD has the characteristic of definite time.

Sharing of installation and contact
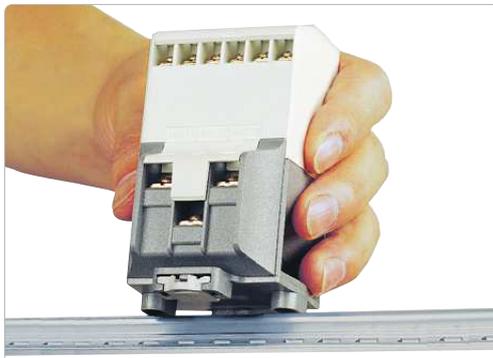

Screw installation ↔ Rail installation sharing
Terminal connection type and penetration type have the common use structure of DIN rail and screw installation.

Terminal connection type ↔ penetration type sharing
If the terminal block of terminal connection type is removed, it is possible to make a penetration type

30A	3~30
60A	0.5~60 [note]

Note) For GMP60-TD, GMP60-TDa GMP60-3TZ (R), 3TN (R), 3T (R)

Control Voltage

110/220	AC100~260V
24	AC24V
48	AC48V
110	AC110V
220	AC220V
380	AC380 (440)V
480	AC180~480V

Note) AC24V, AC48V, AC380/440V, and AC480V are GMP60T model.

Aux. contactor

1c(N)
1c(R)
1a1b

Note) When the power is applied, the system is in the contacting status.

• In case of 1c(N) power supply, 95~96 are Closed.
• Regardless of 1c(R) power, 95~98 are Closed.

Model Type

-	Screw type
	Tunnel type
Sol	Metasol Direct Coupling (Pin)

Operation & setting method

Inverse time characteristic

1. Check the rated voltage and apply the control power to A1 and A2 terminal

If 220V power is supplied to a model for AC110V, overvoltage occurs and thereby EMPR has a failure.

RC (A) Knob
O.L LED (2CT) O.L/Fault LED (3CT)
Test/Reset button
Time Knob
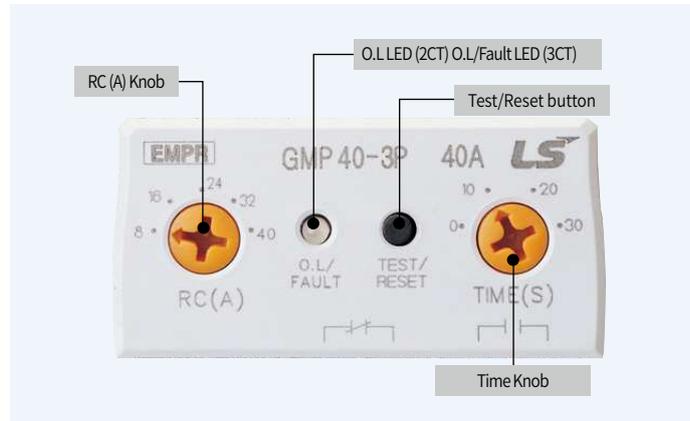

2. With Test/Reset button, check that output contact works normally.

1) If Test/Reset button is clicked once, O.L (display lamp) representing Trip is turned on. If EMPR is Tripped, output contact works.
2) If Test/Reset button is clicked again at the time of EMPR Trip, the display lamp is turned off and the equipment resets to its original state.
3) Auto reset function (Auto Reset)
• In case of overcurrent Trip, the equipment automatically returns after one minute (GMP22-2PA/GMP40-2PA),
• In case of overcurrent Trip, the equipment automatically returns after 0~120 seconds (variable setting) (GMP60T-A).
Note) To prevent a Trip accident, Test/Reset button is designed not to work while a motor is running.

3. Set the operating time

An operating time is based on 600% of rated current in the characteristic curve.

1) Set up the position of operating time control knob (Time Knob) in consideration of a staring time and starting current.
   (E.g., on the assumption that a starting current accounts for 600%of normal operating current and a staring time is 10 seconds, set Time Knob to about 11~12 seconds with 10-20% margin.)
2) An available operating time ranges from 0 to 30 seconds.
3) In case that Time Knob is set to 10 seconds, if the starting current or 600% of rated current is supplied for 10 seconds, immediate Trip occurs.
Note) For a motor with frequent forward/reverse starting, such as a motor of crane or hoist, an EMPR with the characteristic of definite time is recommended

4. Set up a rated current.

Setting is based on the rated current of a motor (normal operating current).
1) Check that a motor's rated current is within the current control range of EMPR.
2) Set RC (Rating Current) Knob up to the maximum and run the motor.
3) In normal operation state, slowly turn RC Knob counter clockwise and stop at the point that overcurrent display lamp (O.L) flickers. At this point, the actual load current value (100%) of the motor is displayed.
4) From the point, turn RC Knob clockwise. Set up the knob at this point that O.L lamp is turned off (less than motor full load current).
   (e.g., when overcurrent display lamp is turned off at 20A, set current = 20×1.1=22A)
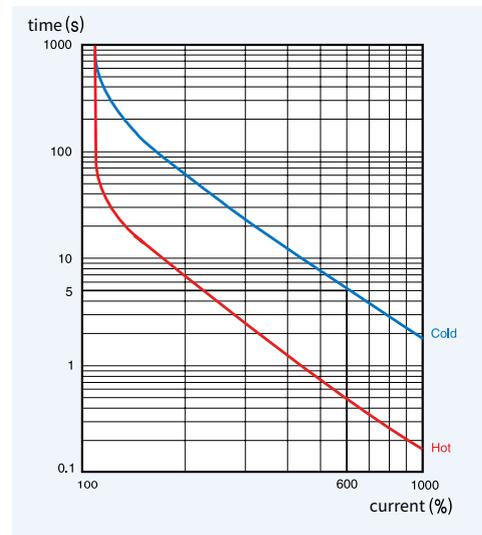

5. Check status of operation by LED

2CT : Overcurrent, Phase failure, Lock/Stall
3CT : Overcurrent, Phase failure, Reverse phase, Phase unbalance, Lock/Stall

1) In case of overcurrent
• If there will be an overcurrent during motor operation, the red color of LED will flicker at 0.4 second intervals.
  After tripping because of overcurrent, the red color of LED will light up.

2) In case of phase failure (2CT EMPR can protect motor from R or T phase failure.)
• If a motor stops running due to phase failure, stall current flows. As a result, it is possible to protect the motor against overcurrent.
  If the motor keeps running in phase failure, it is necessary to protect against phase failure.
• If phase failure occurs in three-phase load (3CT), Trip occurs within three seconds. (O.L LED is turned on)
  R-phase phase failure - Fault LED flickers once (0.4 second) at an interval of three seconds.
  S-phase phase failure - Fault LED flickers twice at an interval of three seconds.
  T-phase phase failure - Fault LED flickers three times at an interval of three seconds

3) In case of phase unbalance
• If phase unbalance factor of three phase is about 50% or more after its calculation, Fault LED only flickers at an interval of 0.4 second
  and then trips after five seconds. (After Trip, the same display as phase failure appears.)

4) In case of Reverse phase
• Trip occurs within 1 second, and the lamp flickers red and green in turn (GMP22/40/60-□R type) or O.L LED and Fault LED flicker (GMP80-3SR).
  In this case, to detect reverse phase, a load current should be more than the minimum current setting range of EMPR.

5) LED operation status

Condition		LED Status	LED Diagram	Remark
Operating status	Normal	LED OFF		
	Over current	0.4 Second intervals		
	Phase unbalance (50%, 3CT)	0.4 Second intervals		GMP 80-3S/3SR model, only red color LED will flicker.
Tripped status	Over current	O.L LED light up		
	Phase failure (3CT) R	1 time for 3 seconds		GMP 80-3S/3SR model, O.L LED will light up and also FAULT LED will flicker.
	Phase failure (3CT) S	2 time for 3 seconds		
	Phase failure (3CT) T	3 time for 3 seconds		
	Phase failure (2CT)	Red LED light up for 0.9 sec LED goes off for 0.1 sec	0.9 | 0.1	
	Reverse phase (3CT)	Red & Green color LED flicker alternately		GMP 80-3S/3SR model, Red/Green LED will flicker.

Note) There are two red color LEDs for O.L (Overload) & Fault in the model of GMP80-3S/SR

Operation & setting method

## Definite time characteristic 1

1. Check the rated voltage and apply the control power to A1 and A2 terminal

If 220V power is supplied to a model for AC110V, overvoltage occurs and thereby EMPR has a failure.

2. Check the Test/Reset button operation

1) If Test/Reset button is clicked once, O.L (display lamp) is turned on, EMPR is Tripped, and output contact runs.

2) If Test/Reset Button is clicked once again when EMPR is Tripped, the display lamp is turned off and the equipment returns to its original state (Reset).

Note) 1. To prevent a Trip accident, Test/Reset button is designed not to work while a motor is running. 2. If Test/Reset button is clicked twice within 0.5 second, it is possible to check the final failure cause.

3. Set the operating time

D-Time (Delay Time) : 0~30 sec

It refers to the time of delaying EMPR operation in order to prevent Trip from a motor's staring current.

1) With the use of D-Time Knob, set up a delay time taken from motor starting to normal running current.
2) If you are unaware of a start delay time, set it to the maximum time and measure how long it takes to reach the normal starting current of the motor, and then set it up again. (Reference: in case of general load, set it to about 3~5 seconds.)

Note) If actual load current fails to detect during a set time, a motor can be damaged. Set up a delay time rightly.

O-Time (Operating Time) : 0~15 sec

It refers to the time taken from the start of overcurrent to EMPR Trip. After the set O-Time, EMPR is Tripped.
1) With the use of O-Time Knob, set up an operating time.
2) If O-Time is the minimum value, EMPR is immediately tripped as soon as overload occurs. (Reference: generally, set it to 4~6 seconds.)
   A-Time (Auto Reset Time): 0~120 seconds; set up an automatic reset time in auto reset type.

4. Set the operating current

Setting is based on the rated current of a motor (normal operating current).
1) Check that a motor's rated current is within the current control range of EMPR.
2) Set RC (Rating Current) Knob up to the maximum and run the motor.
3) In normal operation state, slowly turn RC Knob counter clockwise and stop at the point that overcurrent display lamp (O.L) flickers. At this point, the actual load current value (100%) of the motor is displayed.
4) From the point, turn RC Knob clockwise. Set up the knob at this point that O.L lamp is turned off (less than motor full load current).
Generally, set it to 110~120% of actual load current (set to a value lower than a motor full load current).

5. Check the LED condition when operation

1) GMP60T

Condition		Red O.L LED	Remarks
Operation normal	Off		
Overcurrent	Flicker		Flicker during overcurrent
Trip over-current	On		The EMPR is tripped

2) GMP60-3T/3TR
   The same as the LED operation state in operation.
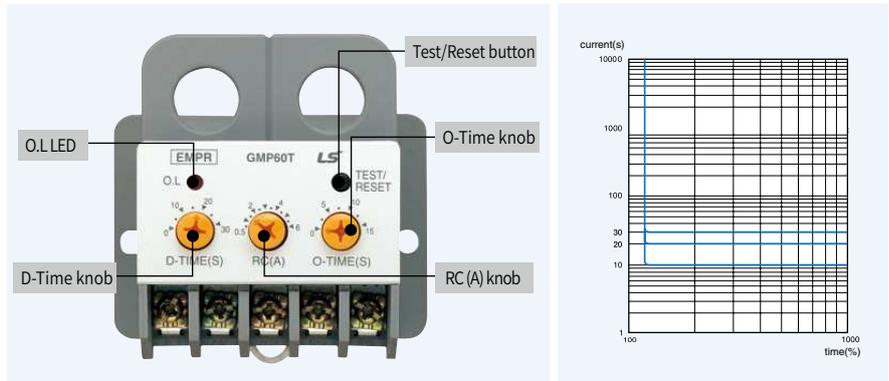

Definite time characteristic 2 (GMP60-TD, TDa)

1. Function & setting menu

1) Set up "Slide S/W, Rated current, and Current transformer ratio" on the basis of a motor's full load current.
To change Slide S/W, turn OFF control power. In the No. 1 menu (1.Cty), make sure to change to a relevant rated current.

Full Load Current	Wire penetration	Slide S/W	Rated current (1.Cty)	Current ratio (5.Ctr)
0.6A or less	4 times	6A	6A	0.25
0.7~1.5A	Twice	6A	6A	0.5
1.6~6A	Once	6A	6A	1
6~60A	Once	60A	60A	10
60~100A	Once	6A	6A	20
100A or more	Once	6A	6A	CT Ratio (Primary/Secondary)

2) In the '0000' display state, click Test/Reset button to go to Setting Mode ('Test' is displayed on screen).
Click FUN button to search for items and set up various values with the use of SEL button.

3) Push FUN button until 'Stor' is displayed, and make sure to save a value with SEL button.

4) If saved completely, '0000' is displayed on screen. If no button operation occurs in ten seconds in the value setting process, the current screen goes to initial screen.

5) If Test/Reset button is clicked in operation, it is possible to check "Set Current/D-T/O-T".
In case of Trip, it is possible to check failure current/failure cause with the use of SEL button.
Note) While a motor is running, a set value is unable to be changed, but is able to be checked only.

2. Setting menu

FUNC	SEL	Description	Default Value	Remarks
1.Ct4	6A/60A	Current type selection	6A	Set the same with rated current S/W
2.o-t	0.5/1~30(SEC)	Trip time setting	30	Set 0.5 to 30 sec
3.d-t	1~60/1(SEC)	Time delay setting	60	Set 1~60 sec
4.r-C	0.5~6.0/5~60	Rated current setting	6/60	-
5.Ctr	0.25/0.5/1~120	Current ratio setting	1	-
6.P-F	oFF/on	Phase loss enable	Off	Operation in less than 3 sec
7.u-C	oFF/30~70(%)	Undercurrent setting	Off	For TDa model only (Overcurrent operation)
8.A-r	oFF/1~20(MIN)	Automatic reset setting	Off	For TDa model only (Off, 1~20min)
9.Srt	oFF/10~8760	Operation hour setting	Off	For TDa model only
A.trt	-	Total running hour check	-	For TDa model only (Up to 10 years, 1 hour unit)
b.r-t	-	Running hour check	-	For TDa model only (Up to 10 years, 1 hour unit)
Sto	-	Store	-	-

Note) 1. Check final failure cause: push FUN+SEL (combination buttons) (if there is no failure cause, 'non' is displayed.)
2. Operating time setting: 'OrH' is displayed after a set operating time(Of, f10~8760 hours setting allowed)

3. Fault status configuration

Protection	FND	Description	Remarks
Over current	O-L	More than set current : Within the set time	
Undercurrent	U-C	Lower than the undercurrent set ratio : Within 3S	For TDa model only
Phase Loss	PF-r	Over 70% of the rate of unbalance : Within 3S	R Phase Loss
	PF-t	Over 70% of the rate of unbalance : Within 3S	T Phase Loss
LOCK	Loc	More than lock set current ratio : Within 1S	
Approaching Running Time	OrH	When Running time approaches at setting time	For TDa model only

Note) 1. If the set operating time in '9Srt' passes, 'OrH' is displayed and EMPR has no output.)
2. How to check 'trt' and 'r-t'

FUNC			Description		
trt	Press the SEL button	Daily Display	Press the SEL button		Time Remaining, Display minutes
r-t	Press the SEL button	Operation time indicator	Press the SEL button	Daily Display	Press the SEL button	Time Remaining, Display minutes

In case of 'trt', if power is Off, the minute unit based time is removed.
If 'r-t' is checked, an operating time represents a total running time taken until a motor is turned Off. It is displayed in the units of day, hour, and minute.

Operation & setting method

Definite time characteristic 3 (GMP60-3TZ, TZR / 3TN, TNR)

1. This product has the characteristic of definite time.
For setting, see pages 21 & 22.

2. Protective function: overcurrent, locked rotor,
phase loss, phase unbalance, ground fault
(and phase reverse)

1) Overcurrent : trip within 3 sec. after D-time at 105% or more
2) Locked rotor : trip within 1 sec. after D-time at 300% or more
3) Phase loss : trip within 3 sec. (phases unbalance rate over 70%)
4) Phase unbalance : trip within 5 sec. (phases unbalance rate over 50%)
5) Ground fault : trip within 0.5 sec. after D-time at over 110% or under 90% of set value
6) Reverse phase : if two out of R, S, and T phases are changed with each other and a current flows.
   Run in 1 second (no detection after TDim- e)

3. Overcurrent trip time

1) Time delay(D-time) setting: between 0.2-60 sec.
2) Trip time(O-time) setting: fixed at 3 sec.

4. Other functions

1) Last fault cause data stored
   • to display it press Test/Reset button 2 times within 0.5 sec.
   • PWR LED flicking in case of no fault

Note) In case of load less than minimum rating of EMPR make the number of penetrating through CT more than 2 times. If not, error may happen to phase loss .

Note) 1. Make power off before changing the rated current with S/W ①.
2. The setting range of RC (A) KNOB ⑥ is recognized as 0.5 ~ 6A or 5 ~ 60 According to the setting value of S/W ①. The value of the scale for RC (A) KNOB ⑥ is 0.5, 1, 2, 3, 4, 5, 6 or 5, 10, 20, 30, 40, 50, 60(A) from the left.
3. Last fault cause function indicates the LED status for the last TRIP.

5. Status of LED configuration

| NO	Function	Setting	Description	Remark
❶	6A/60A	Slide switch	Maximum rated current (6A/60A) setting	-
❷	PWR.	Red LED	Lights up when power is ON Blinking in the failure mode	-
❸	Fault	Red / Green LED	Overcurrent / unbalance in progress : Overcurrent TRIP : Phase loss (unbalance) TRIP · R-phase : · S-phase : · T-phase : · Reverse phase :	🟥 Red LED 🟩 Green LED
❹	GF	Red LED	Lights up after blinking in the event of ground fault	-
❺	D-Time (S)	KNOB	Delay time (0.2 to 60 sec.)	-
❻	RC (A)	KNOB	Rated current setting: 0.5~6A/5~60A	-
❼	GR (A)	KNOB	Zero phase current detection type Sensitivity current setting (0.1~2.5A) Residual current detection type Sensitivity current setting (0.5~6A)	-
❽	Test/Reset	Button	TRIP / RESET alternately perform 1. Check relay contacts - displays fault cause 2. RESET	Pressing 2 times within 0.5 sec. the final failure cause is displayed

MEMO

Perfect Selection of Motor Protection & Monitoring Device!

With the compact system structure and advanced protection functions,
the device provides new standards of next-generation motor protection relay.
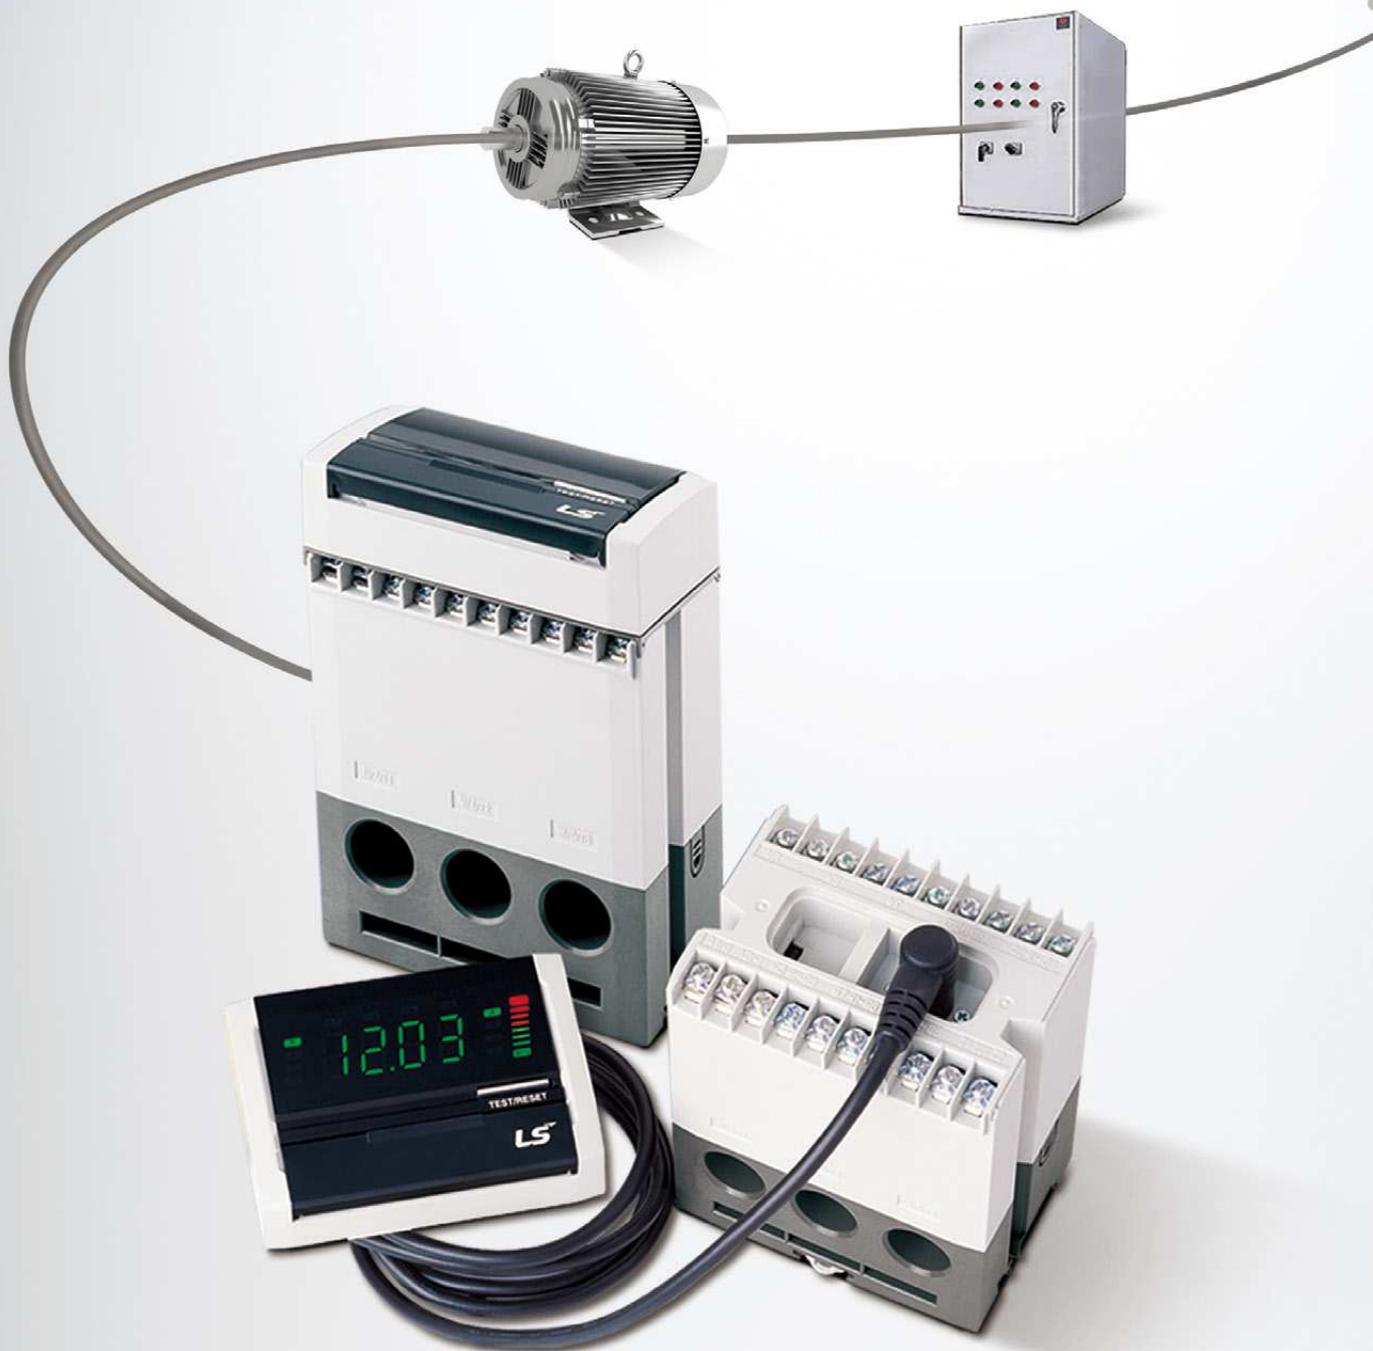

IMP Series

Intelligent Motor Protection Relays

- Ground fault protection for both zero current/residual current
- Support rated current 0.12~100A without external current transformer
- Definite/inverse time selection and diverse protection factors
- Basic application of ground fault/instance protection
- Separation of the display part with the use of Cable
- MODBUS communication and 4~20mA DC output

Contents

Product characteristics

Convenience

Comprehensive Digital Motor Protection Relay with the MCU (Microprocessor Control Unit)
Real-time processing and high precision

Applicable to Inverter Circuits
Thanks to its characteristics to harmonic noise, it can be applied to the inverter control circuits. The available frequency range is 20~200Hz. When the relative harmonic factor is over 30%, a harmonic filter should be installed (However, the ground fault function should be off).

Storage of Fault Events
Up to 5 fault events can be stored for easy fault history management.

One-Body Type and Separate Body Type
The display can be attached to the panel front so that current, operation time and settings can be checked without fetching the unit. With the display separated, the motor protection is available.

Communication support type
RS-485 MODBUS communication with various systems.The model with analogue signals (4~20mA) is compatible with transducer systems.

Various Reset Functions
Manual, automatic and electric reset functions are provided for customer convenience.

Date and Total Operating Time Setup
When a fault occurs, its date and time are stored for easy checkup. When the total operation time is over, it is displayed for changing motor bearings or supplying oil.

Password
Settings are protected with a password.

Total operating time and operating time setting
When the predefined operating time has elapsed, related information is displayed so that operators may replace the motor bearing and check the refueling cycle.

Quick Setup
All settings can be decided quickly on the display.

Wide Setting of Ground Fault Current Sensitivity 30mA~25A
Zero current sensing by zero sequence CT. zero current sensing by Residual circuit.

Reliability

Thermal Inverse Time, Inverse Time and Definite Time Modes
According to user's needs, the motor can be protected in the inverse time mode or definite time mode.

3-Phase Digital Ampere-Meter
3-phase current is displayed every two seconds for motor monitoring.

Wide Current Setting Range: 0.125~100A for One Model
With the slide S/W, the current setting range can be decided 0.5~10A or 5~100A. Depending on the number of CT penetration, even 0.125A current can be protected. (Wire penetration hole is required).

Overcurrent-51

By setting up an operating time in the 1-60 seconds unit on the basis of 6005 of rated current in consideration of a motor's starting time, it is possible to configure the overload characteristic curve of Class 1-60.

If Definite Time Characteristic is selected, the equipment starts to detect overcurrent after the set operating delay time (D-Time) regardless of a motor's generated heat. If overcurrent continues to be supplied after an operating time (O-Time), Trip occurs.

<Inverse Time Characteristic>   <Definite Time Characteristic>
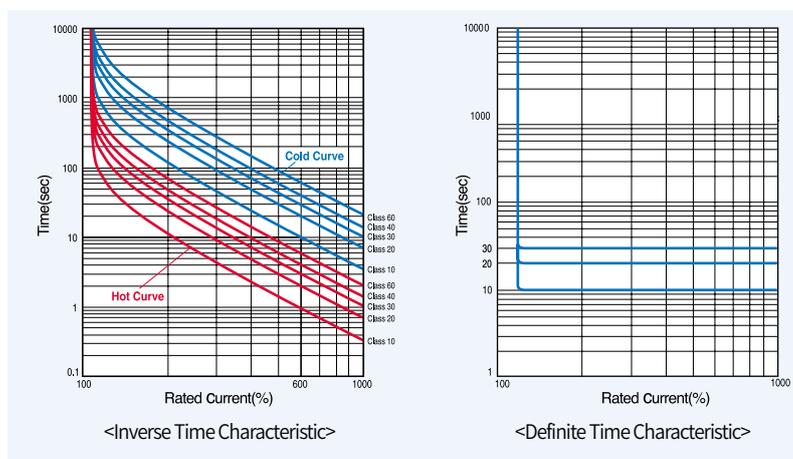

Stall/Locked Rotor-48/51LR

This function is used to prevent the loss and damage made by a motor's rotor stall, starting failure, and staring delay, and to detect an increased load current by overheat overload in operation or the case that load torque exceeds motor torque in order to block a circuit. Overcurrent function by starting current works after a set delay time

Under current-37

This function is used to monitor the no-load caused by the separation or damage of a motor's drive shaft, or to prevent a pump's idle rotation (no-load). It is possible to set up to 30~70% of rated current. It works within three seconds.

Phase fail/Phase unbalance-47P

If phase failure occurs, a motor fails to start. A motor in operation stops due to shortage of torque or has overheat due to continuous reverse phase current.
IMP calculates phase unbalance of three-phase current. It is possible to select one of the two cases: if the calculated result is 70% or more, this function is executed within 1.5 seconds; if phase unbalance factor is 10-70%, trip occurs within three seconds.
* In a single-phase motor, turn OFF phase fail and phase unbalance protection function.
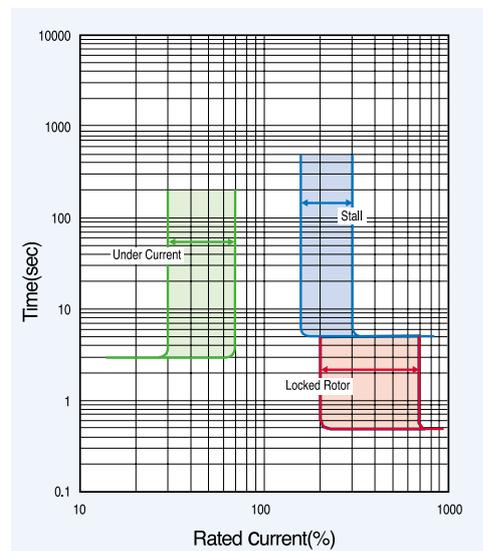

Reverse phase

This function is used to prevent a motor's reverse rotation. After the phase difference of three-phase current inputs is compared, this function is executed within 0.1 second if the phase sequence changes. Reverse phase is checked only if a motor starts up. In a single-phase motor, turn OFF this function.

Ground fault-51G

This function is used to detect ground fault leakage current. In other words, it aims to prevent leakage-induced ground fault and secondary accidents (short circuit and electric shock).
It is possible to set up a current sensitivity and an operating time differently depending on grounding system or protection purpose.
It is possible to set a current sensitivity to 30mA~25A and an operating time to 0.05~1.0 second.

Rated specifications / Model numbering system

Rated specifications

Integral type

Extention type

Protection		Over current, Lock/Stall, Phase failure, Phase unbalance, Reverse phase, Under current, Ground fault, Short circuit
Connection method		Extention type
Operating Time Characteristics		Heat accumulation inverse time / inverse time / definite time
Rated current		0.5~10A/5~100A (Separate)
Display		4digit, 7-Segment
Operating power		AC/DC 85~245V (50Hz/60Hz)
Return method	Auto	1~20min
	Manual / Electrical	On/Off Selectable
Installation / installation method		Display can be installed separately, 35mm DIN rail / Screw installation
Tolerance	Current	±5%
	Time	±5%
	4~20mA Output	±5%
Time setting	Startup delay	1~200sec
	Operation delay	1~60sec
Aux. contact	Configuration	3-SPST(Power supply 1a1b, instantaneous operation 1a) Note1)
	Capacity	3A/250VAC Resistive Load
	Contact minimum load	10mA / 5VDC
ZCT Input		200mA/100mV (Exclusive ZCT) Note2)
Environment	Operation	-10~55°C
	Storage	-20~70°C
	Relative humidity	Below 80%RH (No freezing)
Insulation Resistance		100Mohm/500VDC
Power consumption		1.2X50us 5kV Prototype waveform supply
Fast Transient		2kV/1Min
Power consumption		Below 3W
Certification		CE

Note) 1. See No. 17-19 of A-Group in Setting menu.
2. It is used if zero current detection type is selected.
3. This product is designed for protecting a low-voltage motor with 1,000V or less. Therefore, it should not be used in high voltage lines.

Model numbering system

IMP — C — A420 — 10A — 110/220

Factors Protected	
C	Current

Communication	
NO	None
A420	4~20mA Output
M485	Modbus/RS-485

Current adjustment range	
10	0.5~10A
100	5~100A

Control Voltage	
110/220	AC/DC85~245V
24/36	AC/DC24~36V

1. Check the Test/Reset button

1) Check wires.
2) Note) While the motor is running, the Test/Reset key does not work.
3) Press again the Test/Reset key to reset the EMPR.

Note) While the motor is running, the Test/Reset key does not work.

Current value and information display — Unit display LED
R S T-phase display — Operation mode LED
Communication status LED
Motor state LED
Motor startup button
Trip/alarm release button
Go to previous step, — Select operation mode
Fix/circulate measurement screen — Go to menu, Change and save set value
Go to items (set value increase) — Go to items (set value decrease)

2. Setting

1) Press the Enter key. Then "P-99" is displayed.
   Use the Up/Down keys to change the password.

2) Press the Enter key to enter A-gr setup mode.
   Use the Up/Down keys to select a group and Press the Enter key to enter the
   selected group. Press the Test/Reset key to move back to the previous mode.
3) In the A-Grp mode, Press the Enter key. Then "1.CHA" is displayed.
   Use the Up/Down keys to select an item and Press the Enter key to enter the selected item.
   Press the Test/Reset key to move back to the previous mode.
4) Use the Up/Down keys to set up the value and Press the Enter key to save it.

Note) When the power is supplied first or is resupplied after a power failure, must set up the date in b-gr, 5.S-d.
       Set up the rated current S/W while the power is off.

3. Quick setup

1) Press the "Up and Enter" keys at the same time. "UPLD" is displayed and settings are uploaded to the display.
2) Insert the display to the body without settings, and then press the Test key to enter the test mode.
3) Press the "Down and Enter" keys at the same time. "TEST" is displayed and downloading is completed.
4) Press the Test key to return to the normal mode.
   Note) Communication settings cannot be uploaded or downloaded.

4. Setting checkup

1) Press the Enter key.
2) Use the Up/Down keys to select a group and Press the Enter key to enter the selected group.
   Press the Test/Reset key to move back to the previous mode.
3) Use the Up/Down keys to select an item and Press the Enter key to enter the selected item.
4) Press the Enter key again to check settings.

5. Failure event checkup

1) Press the Up and Down keys at the same time to display "1.O-C" (recent failure events).
   Note) When no failure events are stored, "1.non" is displayed.
2) Use the Up/Down keys to select an event and press the Enter key to go to the selected event.
3) The R-phased failure current is displayed. Every time the Down key is pressed, S-phased failure current, T-phased failure current,
   overload rate and date are displayed one after the other.
4) Press the Test/Reset key to move back to the previous mode.
5) Press the Up and Down keys at the same time to get out of the failure event checkup mode.

6. Forced thermal reset

When the system is tripped while it is in the thermal inverse time mode, if you want to turn the EMPR into the cold mode by resetting
the motor's heat amount, Press the Enter and Test/Rest keys at the same time.

* When a trip occurs due to the thermal excess current, if the motor is started right after it is reset, as the motor is hot, it is highly likely that the motor is tripped again.

Operation & setting method

Setting menu (A Group)

Group	Menu	Setting Value	Description	Default Value
A	1.CHA	dEF/th/n-th	Operation Characteristics (Definite/Thermal Inverse/Inverse)	n-th
	2.O-t	1~60s	Operation Time (sec)	60
	3.d-t	1~200s	Delay Time (sec)	If dEF
	4.r-C	0.5~10A/5~100A	Rated Current	Max. value
	5.Ctr	0.25, 0.5, 1~200 [note 1]	CT Ratio (4 times, twice, once)	1
	6.Loc	Off, 200~800%	Lock Protection (sec)	Off
	7.StL	Off, 150~500%	Stall Protection (sec)	Off
	8.P-F	Off/On	Open Phase	Off
	9.P-U	Off, 10~70%	Unbalance Protection (%)	Off
	10.rP	Off/On	Reverse Phase	Off
	11.UC	Off, 30~90%	Under Current Protection (%)	Off
	12.gF	0ff, 0.03, 0.05/0.1~3A	Ground Fault Operation Current (Zero sequence CT) (A)	Off
	13.gn	Off, 20~500% (FLCmin) [note 2]	Ground Fault Operation Current (Residual circuit) (FLCmin)	Off
	14.gt	0.05, 0.1~1.0s	Ground Fault Operation Time(sec)	-
	15.gd	On/Off	Ground Fault Delay During Start	On
	16.IC	Off, 500~1000%	Instantaneous Protection (%)	Off
	17.AL	I-tp, I-AL, ALo, U-C, OrH	07-08 Output setting (see the output information described below.)	I-tp
	18.Ar	On, 60~110/10% [note 3]	07-08 Output setting (current or no current, and alarm)	On
	19.cS	1A1b, 2A, 2b	Contact (95-96, 97-98) Setting	1A1b

Note) 1. In case of CT ratio, rated current setting S/W is not displayed; in case of 100A product, 5.Ctr(CT) item is not displayed.
　　　2. In case of 10A rating, it is possible to set to 0.1~2.5A; in case of 100A rating, it is possible to set to 1~25A.
　　　3. No. 18 menu appears only if "ALo" is enabled in No. 17 menu.
　　　(On: if a current is recognized, 07-08 contacts are displayed. 60~110%: if an on-load current value is higher than a set load factor, 07-08 contacts are displayed.)
　　　4. No. 17 menu operation

17.AL Setting	Output conditions	Alarm display type	
		Motor operation	07-08
I-tp	Detect instantaneous current	Motor stop	NC
I-AL	Detect instantaneous current	Keep status	NC
U-C	Detect on-load less than low current set value	Keep status	NC
OrH	Set and display operating time	Keep status	NC
ALo	Select 18.Ar setting	Comply with the set value of the No. 18 item	
18.Ar Setting	If ALo is set in the No. 17 menu	Motor operation	07-08
On	Display on-load status(I > 0A)	Keep status	NC
60~110%	On-load of current higher than a set value	Keep status	NC

19.cS Setting	Output conditions	Contact display type	
		95-96	97-98
1A1b	Normal operation status	NC	NO
	Ground fault/leakage accident	NO	NC
	Failures including overcurrent, phase failure, reverse phase, and ground fault	NO	NC
2A	Normal operation status	NO	NO
	Ground fault/leakage accident	NO	NC
	Failures including overcurrent, phase failure, reverse phase, and ground fault	NC	NO
2b	Normal operation status	NC	NC
	Ground fault/leakage accident	NC	NO
	Failures including overcurrent, phase failure, reverse phase, and ground fault	NO	NC

Setting menu (B Group)

Group	Menu	Setting Value	Description	Default Value
B	`1.E-r`	On/Off	Electric Reset	On
	`2.A-r`	Off, 1~20min	Automatic Reset (min)	Off
	`3.r-t`	Hour/Minute	Run Time	Time Check
	`4.Srt`	Off, 1~8760 time	Run Time Setup (Hour)	-
	`5.S-d`	2009/01.01/00:00	YY/MM/DD/ HH:MM (View/Setup)	-
	`6.trt`	Day/time : min	Total Run Time	Time Check
	`A.t-d`	0.5~10/5~100A	20mA Output settings	A420 model
	`A.Adr`	1~247	Communication address	
	`b.bPS`	96/192/384	Communication speed	M485 model
	`c.S-P`	On/Off	SWAP	

Note) 1. If power is first supplied or power is recovered after outage, make sure to enter date information (5.-sd).
      2. Auto reset is applied only to overcurrent Trip.

Operation display

display	Description	Remark
`O-C`	Over current Trip	Operate within predefined time.
`U-C`	Under current Trip	Operate within 3 seconds
`P-F`	Open Phase Trip	Operate within 1.5 seconds when the unbalance rate is over 70%.
`P-U`	Unbalance Trip	Operate within 3 seconds. note 4)
`Loc`	Lock Trip	Operate within 0.5 seconds. note 4)
`StL`	stall Trip	Operate within 3 seconds.
`r-P`	Reverse Phase Trip	Operate within 0.1 second.
`g-F`	Ground Fault Trip	Operate within predefined time.
`Sho`	Instantaneous Trip	Operate within 0.05 seconds.
`OrH`	Elapsed Time (No Trip)	The operation time is reset when the Reset key is pressed.
`C.Err`	Communication Fault between Body and Display (Press the ENTER/RESET key to return to the normal mode)	
`u.Err`	Different program version between main body and display part (if this message appears, contact our company.)	

Note) kW, kVar, and V indicate the specification of the voltage models (under development).

Note) 1. The maximum allowable operating time of Loc function and reverse phase function is +50mSec.
      2. Reverse phase function is detected for one second at the time of startup.
      3. The allowable operating time of the instant function is +20mSec.
      4. Inverse time: detect after O.t, Definite time: detect after D-t

7. IMP Specifications for low voltage 3-Phase induction motors (Reference)

Full Load Current for the Motor	IMP Settings			External CT	Motor Output (Less than kW)		
	Current Selection S/W	Wire Tunnel	CT ratio		220V	380V	440V
0.7A or less	0.5~10A	4 times	0.25	-	0.1	0.18	0.2
0.7~1.6A		Twice	0.5	-	0.25	0.55	0.6
1.6~8A		Once	1	-	1.5	3	3.7
7~100A	5~100A	Once	1	-	25	45	55
90~120A	0.5~10A	Once	30	SCT-150	30	55	55
120A~160A		Once	40	SCT-200	45	75	90
160~240A		Once	60	SCT-300	55	110	132
240~320A		Once	80	SCT-400	90	160	160
320~400A		Once	100	500 : 5	110	200	200
400~480A		Once	120	600 : 5	132	250	250
480~640A		Once	160	800 : 5	160	320	320

Note) 1. This table is written based on the full load current.
      2. The CT is selected as a reference for the EMPR's current setting range.

# Operation & setting method

8.Analog (DC 4~20mA) output

1) The biggest current out of measured 3-phase currents is converted into DC 4mA~20mA and the current measured remotely by digital meter can be displayed.

2) When there is no current, 4mA is sent. If the current goes beyond the predefined value, 20mA is sent.

$$\bullet \text{Output Current} = \frac{16mA}{\text{Setting}} \times \text{Load Current} + 4mA \text{ (Settings are changed in A.t-d of b-gr)}$$

3) When the system is the 0.5A~10A setting mode, measurement starts from 0.3A. When the system is the 5A~100A setting mode, measurement starts from 3A. Thus, when the current is under 0.3A (3A), 0A is measured and output is 4mA. (To measure the load current correctly, an appropriate CT should be used).

Note) The allowable burden is less than 500Ω. Considering the receiver resistance (usually 250Ω) and track resistance), the shielding cable should be used.

Analogue output when the output is set to be 0.5A (5A)

Analogue output when the output is set to be 5A (50A)

Analogue output when the output is set to be 10A (100A)
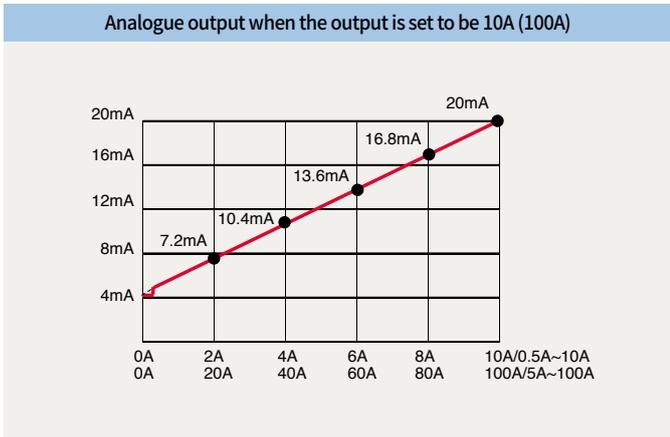

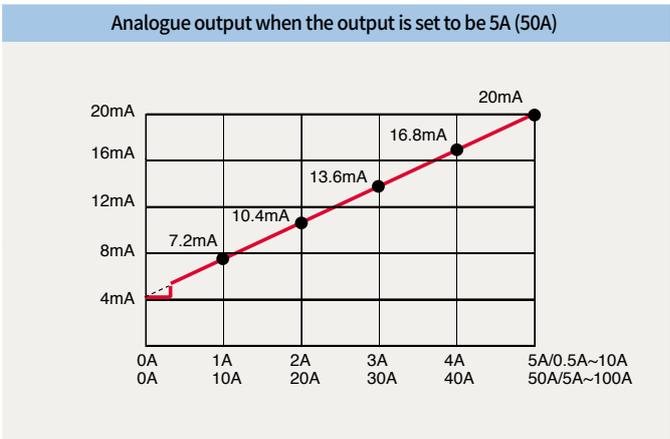

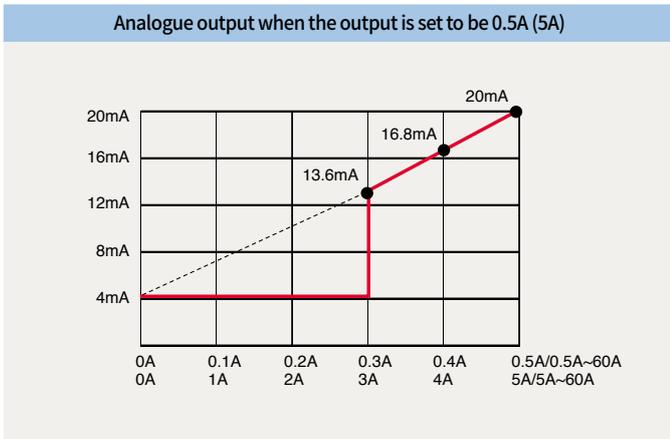

Terminal configuration

Terminal layout	Communication specification
VR VS VT TRX(+) TRX(-) 05 ┤├ 06 A1(+) A2(-) 95 ┤├ 96 97 ┤├ 98 07 ┤├ 08 Z1 ZCT Z2	• Operation mode: Differential • Distance: Max. 1.2km • General RS-485 shielded twist 2-pair cable • Baud rate: 9600/19200/38400bps • Transmission Method : Half-Duplex • Max. In/Output Voltage : -7V~+12V

Engrave	Description	Remark
A1(+), A2(-)	Input terminal for operation power	AC/DC85~245V
95-96	When the power is ON (NC contact output)	Settings Menu Reference
97-98	When the power is ON (NO contact output)	
07-08	Converted to the NC mode only when an instantaneous trip occurs.	
Z1, Z2	Output terminal for the zero-phase sequence current transformer	Specific ZCT (for the EMPR)
TRX(+)	RS485 terminal (TRX+) Or 4~20mA (+) output	M485, A420 Type
TRX(-)	RS485 terminal (TRX-) Or 4~20mA (-) output	
VR/VS/VT	3-phase voltage input terminal	Specifications not available for IMP-C models
05-06	Output terminal for voltage protection	

Note) 1. The 3-phase voltage input terminal and 05-06 output terminal should be connected only for voltage protection models, which will be released in the future.
2. For RS485 connection, the terminal resistance should be 120Ω.
3. For 4~20mA current, the maximum burden should be less than 500Ω.

With the External CT
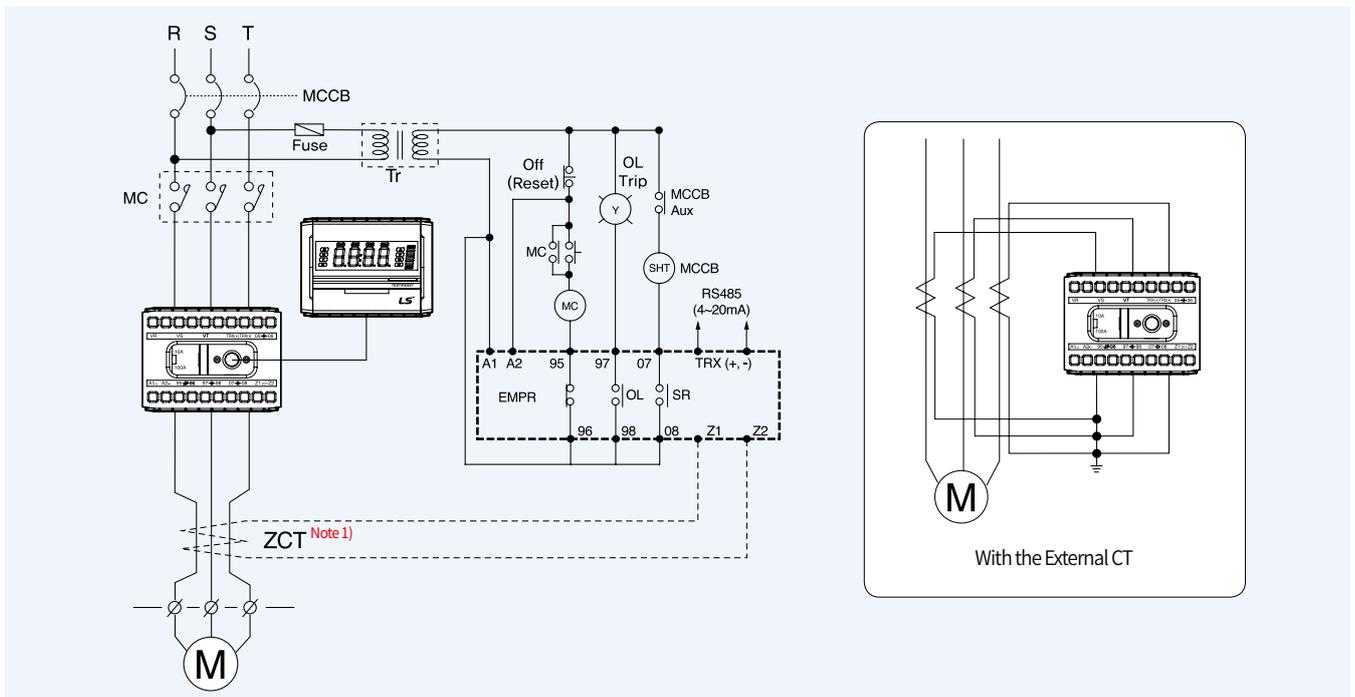

Note) 1. When the zero-phase-sequence current transformer is used to detect ground faults, connect the ZCT.
2. When the single-phase motor is used, all phases are connected except the S phase, and open-phase, unbalance and ground fault should be set OFF.
3. It is possible to change settings of output contact(95-96, 97-98, 07-08) at your discretion.

Dimensions
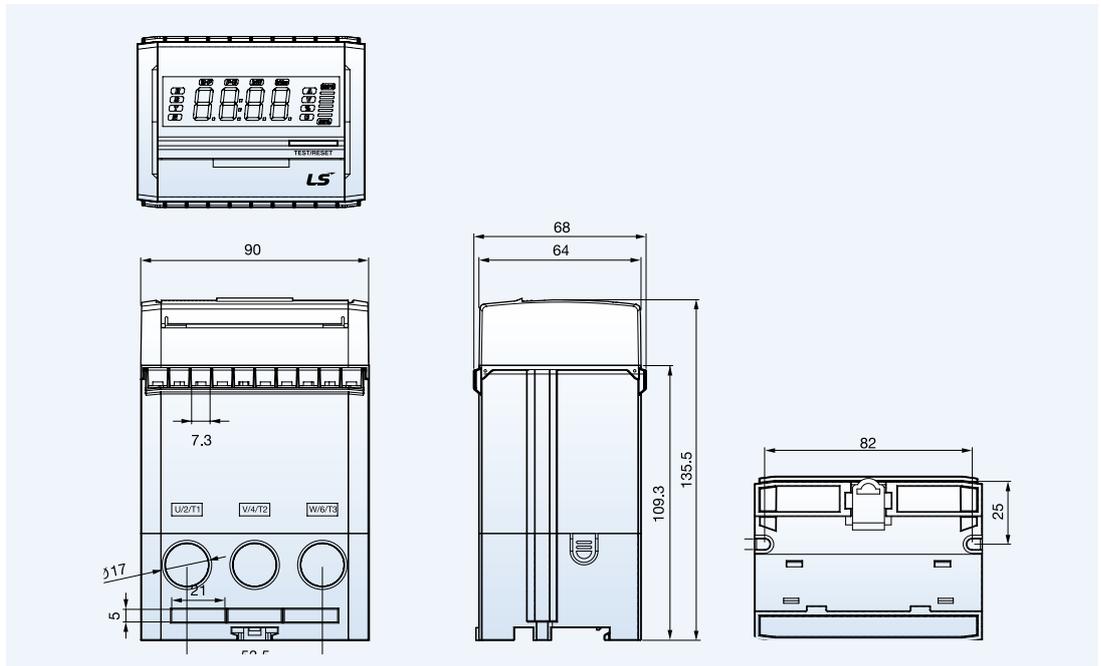

One-body type

Note) The cable should be purchased separately (1m/1.5m/2m/3m).

Separate body type
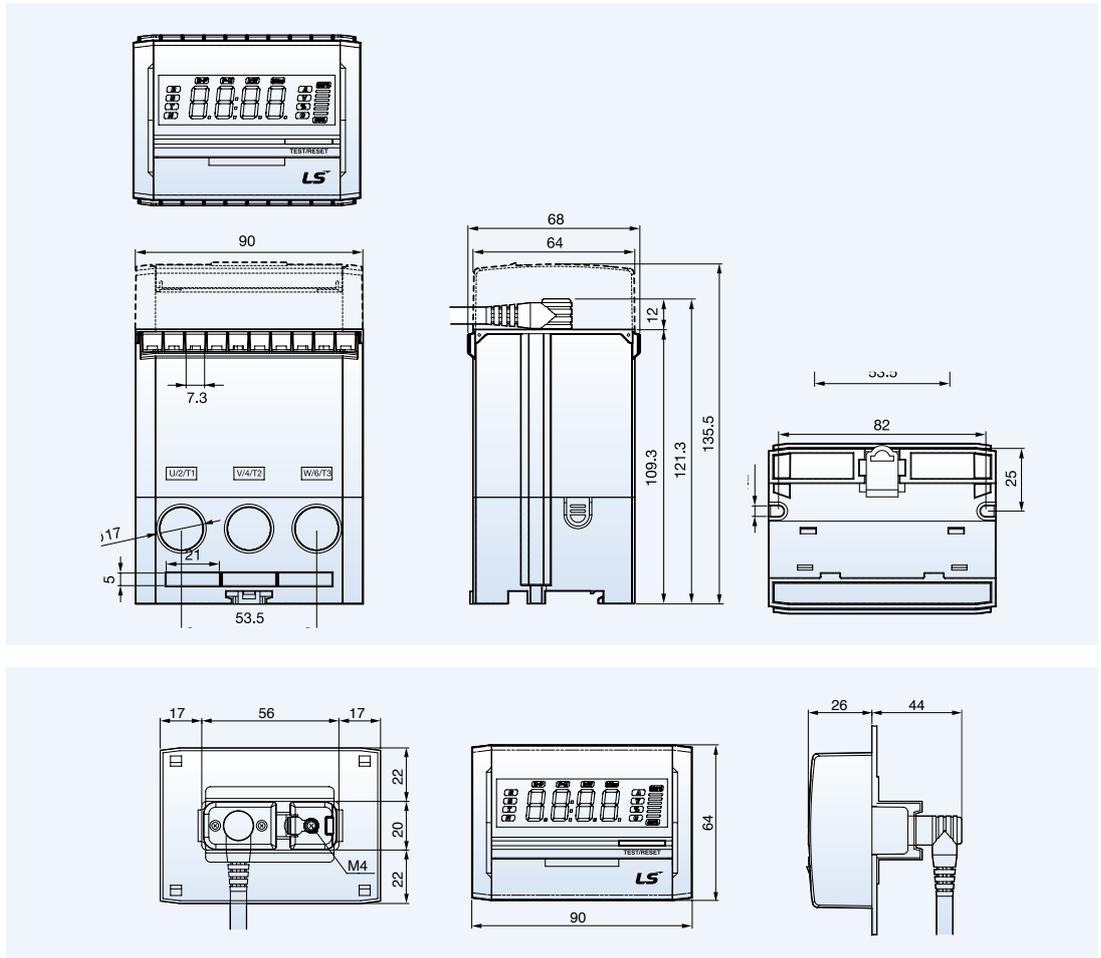

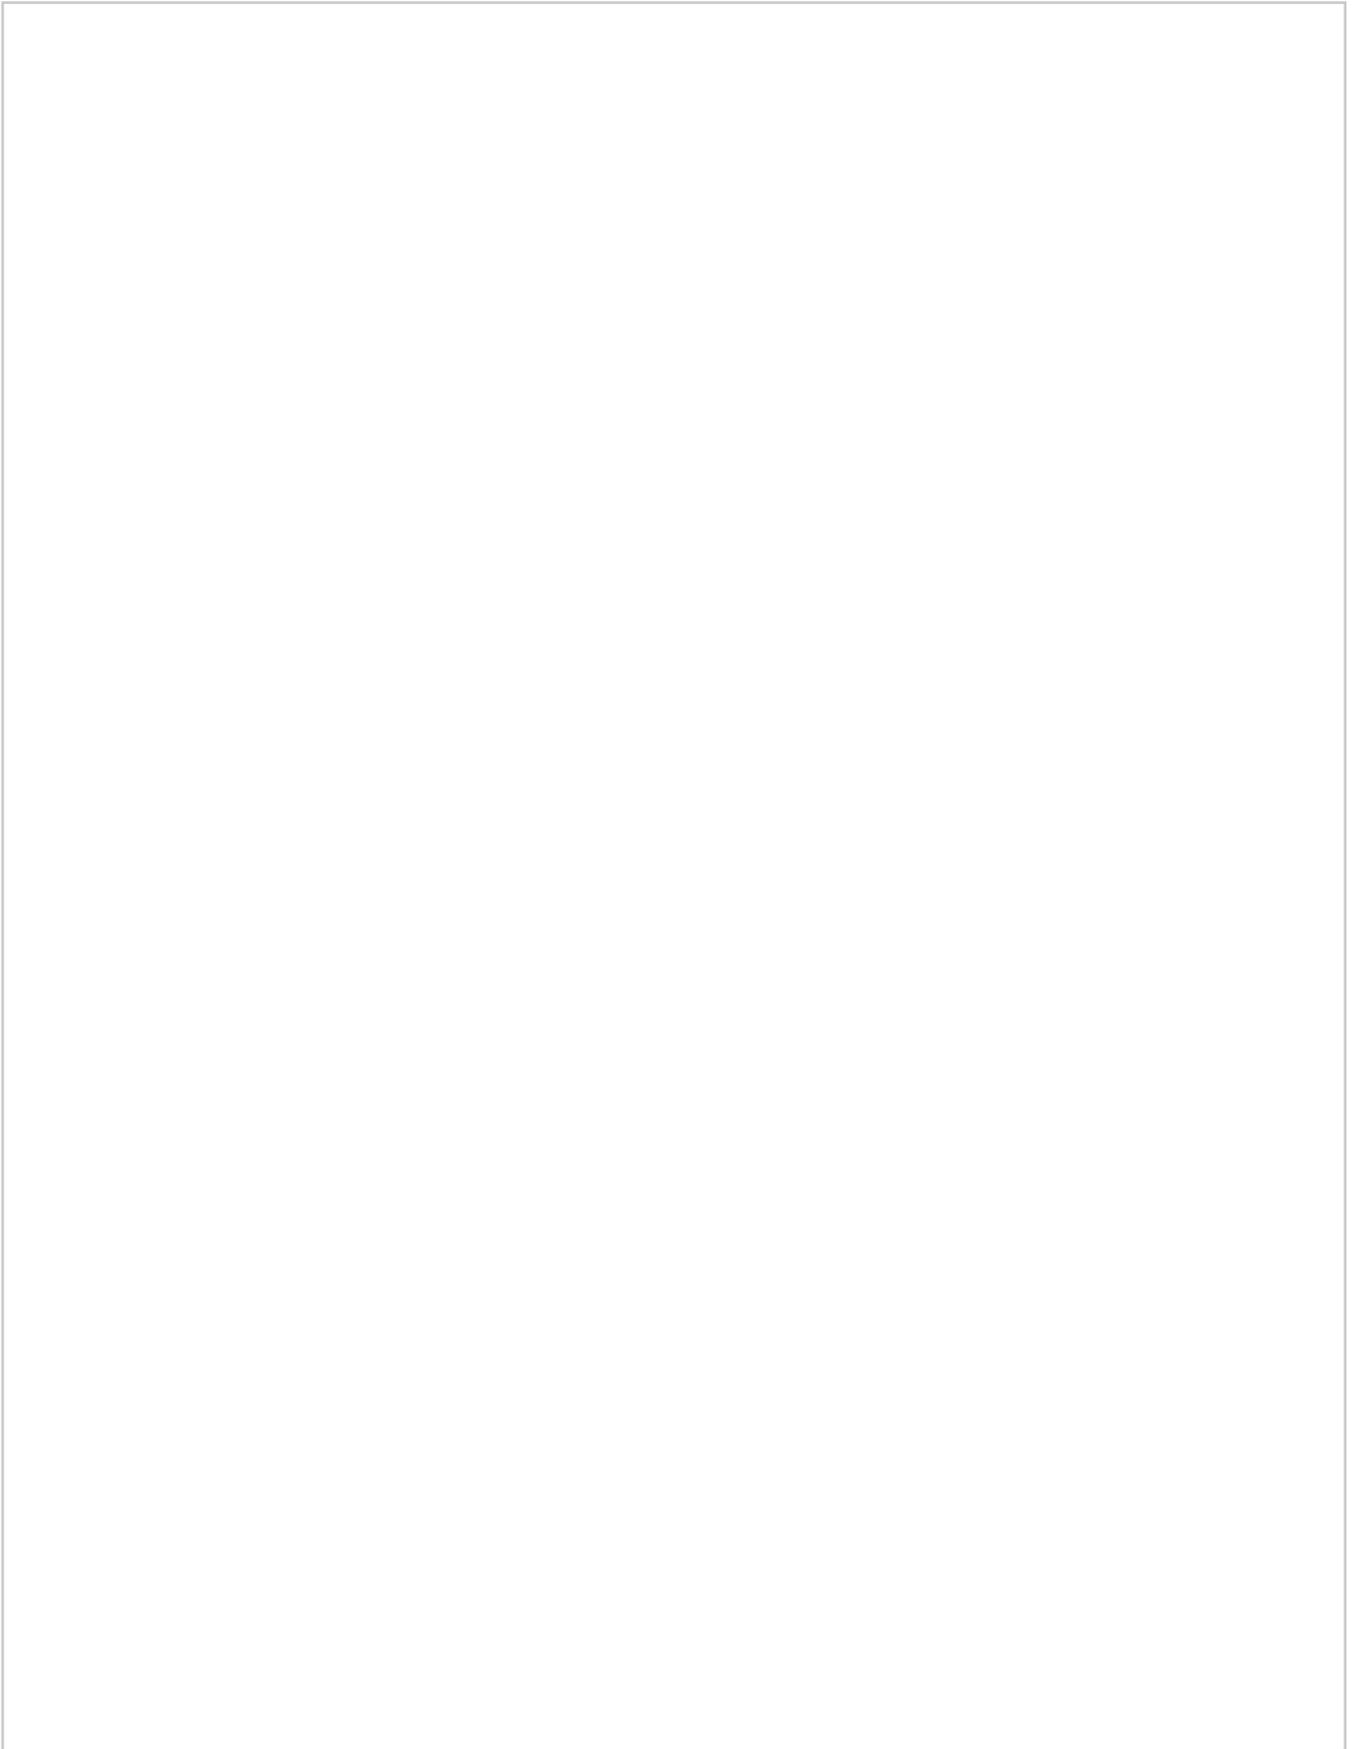

Innovative Upgrade of Motor Control Panel!

More compact and Safer! We implement perfect motor protection.

- Power, Voltage, Current (measurement error: 1%)
- Power, Voltage, Current, Power Factor Protection
- Harmonic measurement (1st to 16th)
- Diverse motor starting types
  (Full voltage, Y-D, Reversible, Reactor, Inverter Starting)
- Modbus communication and 4~20mA

One model with various motor starting types

One S-EMPR model is applicable to various motor staring types, such as full voltage starting, Y-△ starting, reversible staring, Reactor starting, and Inverter starting.

A variety of SCADA functions based on sequence structure

With a simple sequence, it is possible to not only control local operation panel (LOP) and MCC panel, but conduct Supervisory Control And Data Acquisition through SPLC or DCS based auto operation and communication.

MMP Series

Smart Electronic Motor Protection Relays

- Current, Voltage, Power Measurement and Power Factor Protection
- Instantaneous interruption compensation and restarting
- Harmonic measurement (1st to 16th)
- Modbus communication and 4~20mA

C o n t e n t s

Product characteristics

Convenience

Comprehensive Digital Motor Protection Relay with the MCU (Microprocessor Control Unit)
Providing real-time processing and high precision

Applicable to invertor circuits
It can be installed in the downstream of a speed driver where harmonic
noise exists. The allowable frequency range is 10 to 400Hz.
A harmonic filter must be used if THD (Total Harmonic Distortion) is over 30%.
* Set the ground fault mode off to avoid the trip due to current unbalace.
* Voltage parameters are not available. Power measurement accuracy is not guaranteed.

Function to store the cause(s) of failure / Fault
Up to 5 motor failure events may be saved in the system, so that the failure history can be easily
identified.

One-Body Type and Separate Body Type
The display unit can be separated from the device to mount on the face of the panel, which enables the
access to the unit without opening the door. All the functions remain unchanged after the separation.

Communication function (RS485 Modbus and 4~20mA output)
With universal RS485/Modbus communication types, it is possible to establish various system and
communication networks.
Analog current signal (4~20mA) output is compatible with conventional TD(Transducer) based system.

A wide range of reset functions
Manual/Automatic/Electrical reset functions are provided for user convenience.

Date information display
When a failure occurs, the date and time of failure occurrence are saved in the system to accurately
identify the date of motor failure.

Password setting
When changing the set values, a password must be inserted.

Total operating time and operating time setting
When the predefined operating time has elapsed, related information is displayed so that operators
may replace the motor bearing and check the refueling cycle.

Quick Setup
Same setting for another devices in different panels can be done simply via the display unit.

Reliability

Thermal heat build-up inverse time/inverse time/definite time selection function

It is possible to select one of two types of inverse time and definite time in order to protect a motor perfectly.

Wide setting range and Dual protection

Providing Ground fault protection by dual detections -Zero-phase current and Residual current levels.

Up to 100A the device can be used without external CT to providing convenience and cost-effective solution.

Various Motor Starting Modes

In a Single Device several starting modes of operation available : Full voltage start, Y-△ start, Reversible start, Reactor start, Inverter start.

Metering of Current, Voltage and Energy (with 1% accuracy for A & V)

Real-time energy metering with high accuracy to support energy-saving Current / Voltage THD measurements (16 harmonic)

Carrying out complex relay functions related to Current, Voltage, Energy and Power Factor
Overpower alarm supported for energy monitoring

Self-diagnosis and Sequence monitoring

Providing a self-diagnosis function such as internal memory check in order to check fault conditions quickly

Power loss and Restarting

Device restarts after the momentary power loss for less than 30 seconds and returns to the former state. Time-delay setting between 0 to 300 sec. is available to prevent overload from all the motors' restarting at the same time.

Frequent-Starting Protection
The number of automatic resets for the set time (20 minutes) is settable to provide frequent-starting protection.

Current hamonics(%)	0~100%	±5.0%	2nd -16th odd harmonics

Current protection

Over current

The device provides overcurrent protection either with inverse-time or with definite-time element.

1) Inverse-time delay curve
The trip time decreases as the overcurrent increases in an inversetime curve.

Inverse-time delay curve
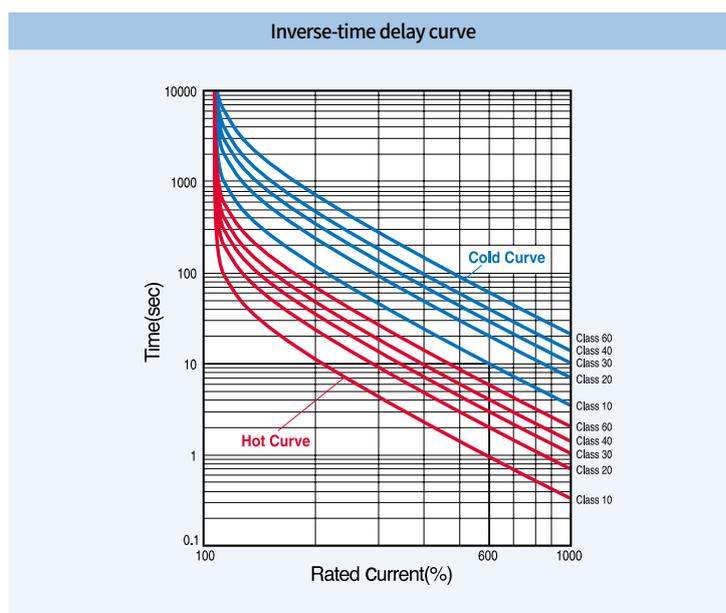

2) Definite-time delay curve
The operating time is unaffected by the magnitude of the overcurrent.

Definite-time delay curve
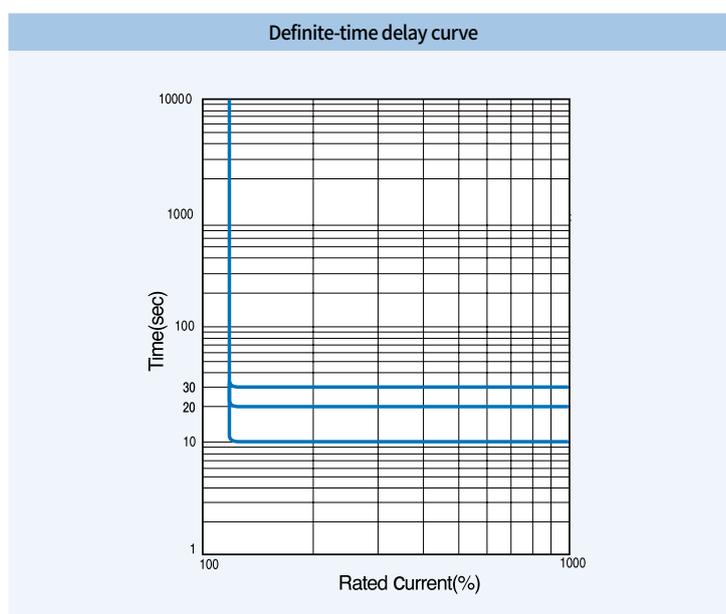

Stall/Locked rotor

Stall activates when the motor is unable to rotate due to any externally mechanical obstruction, and Lock activates due to internal issue of the motor.

Phase fail/Phase unbalance

The motor is unable to start under phase loss. If it occurs while the motor is running it causes motor stopping by lack of torque, or significant rotor heating by reverse current. The S-EMPR calculates the percent three-phase unbalance current. If it exceeds 70%, which is determined to be phase loss, the device trips within 1.5 sec. If it is between 10 to 70% the device trips within3 sec. This function is disabled for a single-phase mode.

Product characteristics

Reverse phase

This protection is for preventing the motor from reverse rotation. The device detects motor phase rotation and trips within 0.1 sec. if phase sequence is incorrect. It detects when the motor is starting.
* This function is disabled for a single-phase mode.

Under current

If the real load current falls below the warning or trip level for longer than the time-delay setting, the device can issue a warning or trip signal.

Ground fault protection

Ground fault

Stall activates when the motor is unable to rotate due to any externally mechanical obstruction, and Lock activates due to internal issue of the motor.

Zero-phase ground current

ZCT in or out of the product is used to detect zero current flowing in three phases.

Selective ground fault

If a non-grounding system has ground fault, the current over the zero current transformer of each distribution line flows from the load side to the power side in a good line, and from the power side to the load side in a bad line. This protection function is able to select and block a bad line by determining the direction of failure current on the basis of the zero voltage.

Instance

While an AC motor is running, if an actual load current value is higher than an set value of instantaneous current, Trip occurs in 50msec.
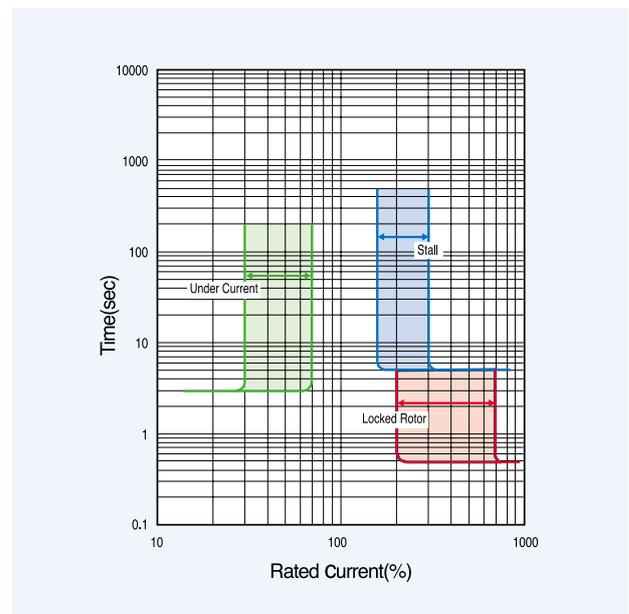

Selective ground fault protection

If a non-grounding system has ground fault, the current over the zero current transformer of each distribution line flows from the load side to the power side in a good line, and from the power side to the load side in a bad line. This protection function is able to select and block a bad line by determining the direction of failure current on the basis of the zero voltage.

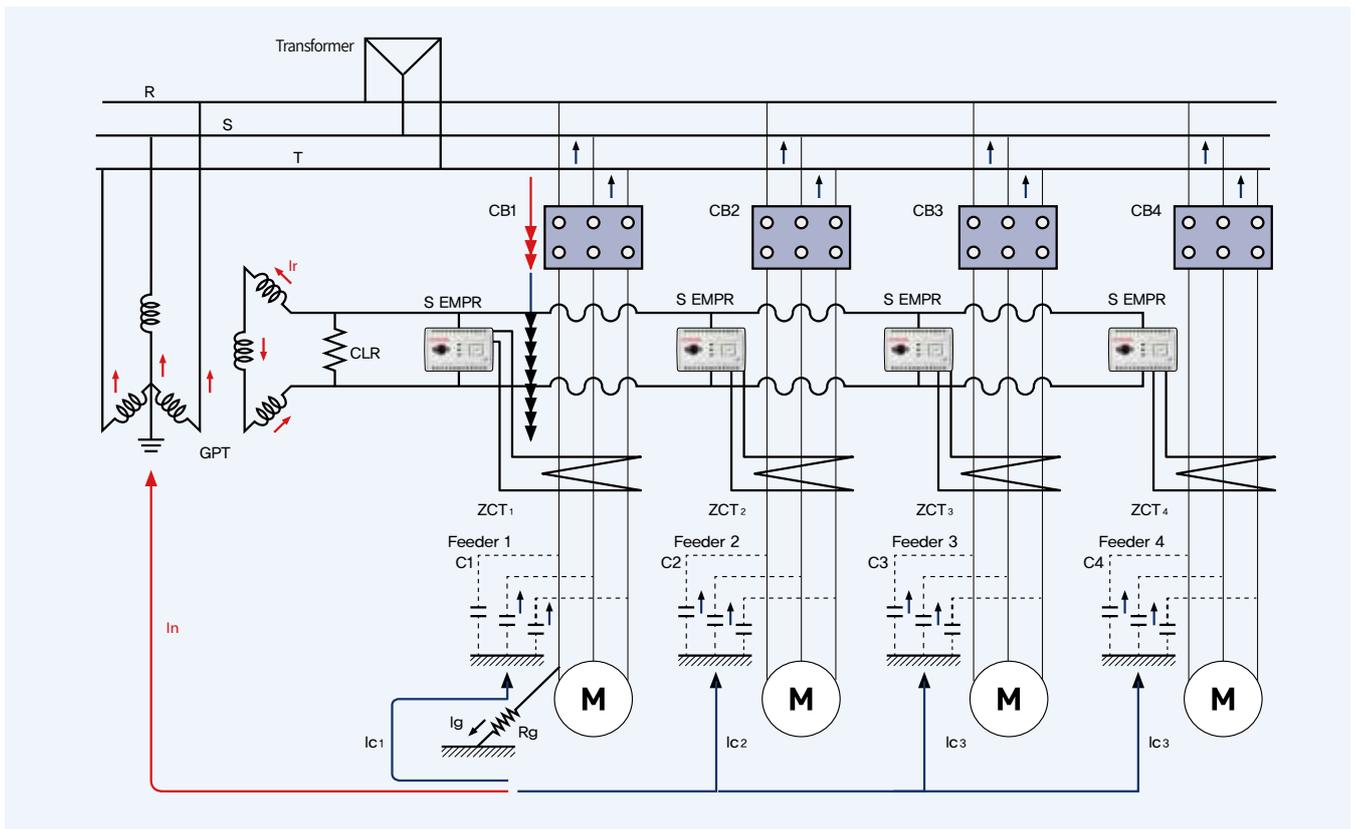

① - GPT : Grounding Potential Transformer

② - ZCT1, ZCT2, ZCT3, ZCT4 : Zero current transformer

③ - CLR : Current-limiting resistor

④ - CB : Circuit breaker

⑤ - In : Current over GPT

⑥ - S-EMPR MMP S : Smart digital motor protection relay

⑦ - Ir : Current-limiting resistor current

⑧ - Rg : Ground fault resistance at ground fault point

⑨ - In : Current over GPT

⑩ - C1, C2, C3, C4 : Line capacitance of each feeder

⑪ - Ig : Ground fault current

⑫ - Ic : Line charging current (1c1+Ic2+Ic3+Ic4)

Operating characteristic
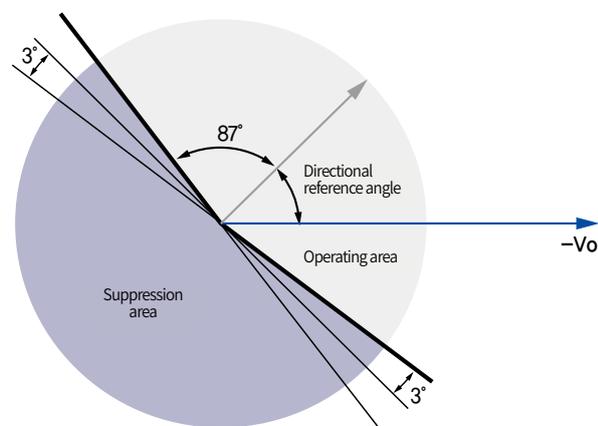

As shown the figure, the bad line (Feeder1) and the good line has an opposite current direction. With the use of this current direction, it is possible to select one. If another line has a failure, the charging current of the line flows in an opposite direction from the current flowing at the time of the accident. Therefore, it does not run.

In a non-grounding system, the ground fault current is the sum of the line charging current and the limiting-resistance current. Since it is relatively small, zero CT(ZCT) is needed. This product has ZCT built in so that it is possible to make a system simply.

Product characteristics

Voltage & Power protection

Over current

Overvoltage protection detects the voltage levels and operates if they are greater than the setting to protect the sensitive loads or circuits against such condition.

Under voltage

If the voltage levels fall below the setting the Undervoltage protection issues a warning or trip signal to protect the sensitive loads such as a inductive motor.

Phase fail/Phase unbalance

This protection operates if the percent phase-to-phase voltage unbalance is greater than the setting.
Used to prevent an excessive vibration of three-phase induction motor and a damage of the stator and rotor windings.
This function is disabled under a single-phase mode.

Reverse phase

This protection operates if the percent phase reversal voltage is greater than the setting.
It detects when the motor is starting. This function is disabled for a single-phase mode.

Over power

The overpower element operates if the three-phase active power exceeds the setting level.
This element can be used to prevent the power from entering the generator before disconnecting from the system when the generator operation is finished.

Under power

The underpower element operates if the three-phase active power falls below the setting level.

Over power factor

The over power factor element operates if the power factor exceeds the setting level.
If the load is very small, especially for no-load the capacitive current may flow due to overcapacity of the capacitor in line,
which causes the power loss of the line and transformer, and electric stress on motors. This element can be used to protect against such current.

Under power factor

The under power factor element operates if the power factor falls below the setting level.
If the power factor of a customer falls below that of a generator in a power plant the generator current increases over the rated current or the power output is limited. For this reason, the power factor of a customer is regulated.
In addition, the under power factor causes the increase of the input current which prevents the temperature rise in cables, transformers and motors.

Communications

Modbus specification

Communication number	1~247
Baud rate	9600, 19200, 38400 bps
Communication Parity	None, Even, Odd
Stop Bit	1bit (fixed)
Communication data swap	OFF / ON (Limited to float, long data of 0x04 (Read Input Registers))
Operation mode	Differential
Communication distance	Max. 1.2km
Cable	RS-485 Shielded Twist 2-Pair Cable
Transmission Method	Half-Duplex–
Max. In/Output Voltage	-7V~+12V

Communication system configuration
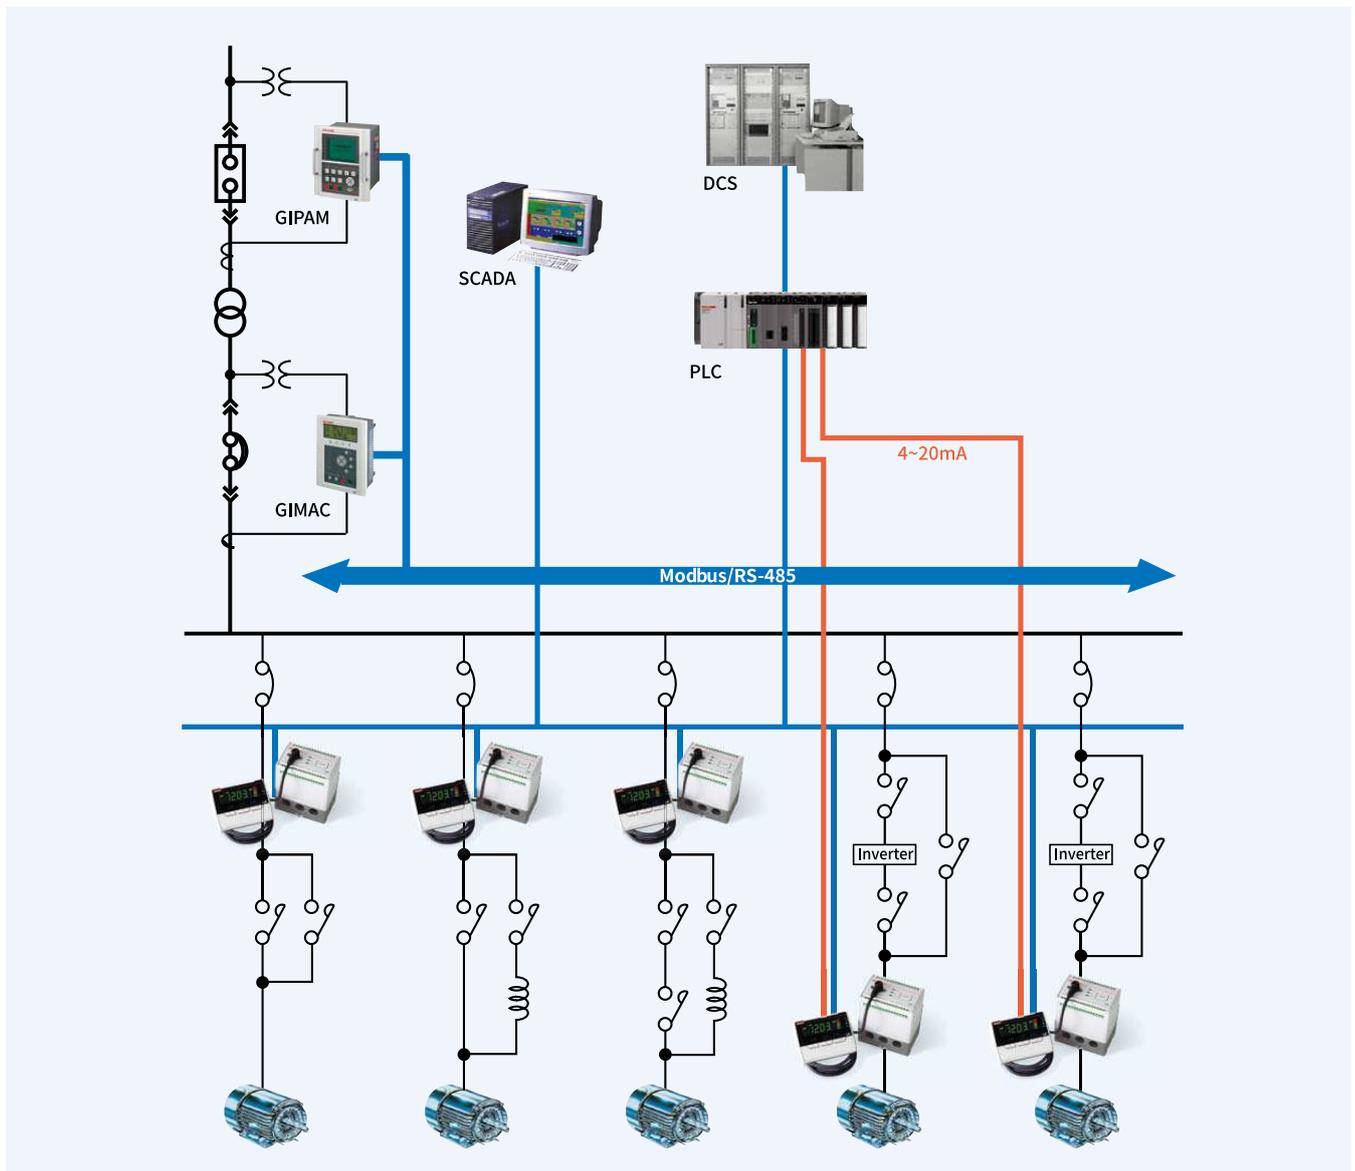

Product characteristics

Analog (4~20mA) output function

Specification

- This function measures the maximum out of the 3-phase currents and converts it into
  DC 4~20mA for output, which can be converted back to the original value by a digital meter.

- 20mA Output Settings : 0.5~10A or 5~100A
  Note) 1. In the 0.5~10A setting mode the device starts to measure from 0.15A, which means the current 0.15A or less is measured as 0A and the output becomes 4mA.
  (0.15A when one> 4mA is being a real measurement)
  2. Accuracy at 25℃ : : ± 0.15% / ℃

- During stopping : 4mA
- Rated setting value or more : 20mA
- Load : 500Ω or less
  Note) The allowable burden of cable must be less than 500Ω.Shielded cables are recommended in consideration of the resistance
  of the receiving meter (typically 250Ω) and the line resistance.

$$* \text{Output current} = \frac{(I\,\text{upper} - I\,\text{lower})}{\text{TD setting}} \times \text{load current} + 4\text{mA}$$

$$= \frac{16\text{mA}}{\text{TD setting}} \times \text{load current} + 4\text{mA}$$

Analog output for 10A (100A) output setting
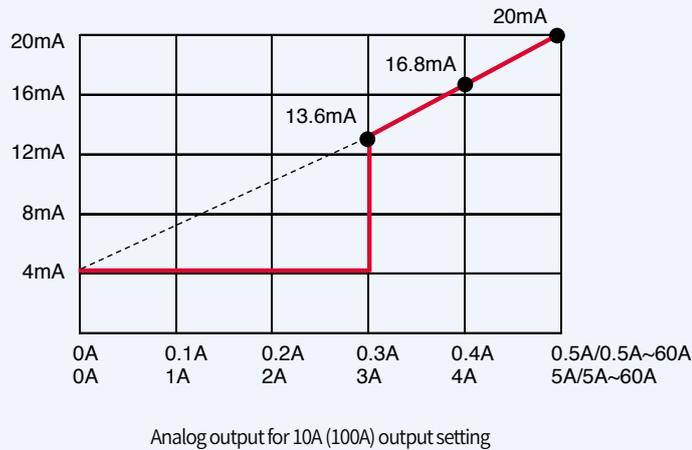

Rated specifications

Connection		Tunnel type (Passing through CT holes)
Operation characteristic		Thermal-inverse / Inverse / Definite
Rated current		0.5~10A/5~100A (Select Rated on Order)
Display screen		4 digit, 7-Segment, LED
Control Power		110Vac or 220Vac 50/60Hz
Reset	Auto	1-20 minutes
	Manual	ON / OFF selectable
Mounting		Display unit : sepatately mountable
Accuracy		Current and voltage metering : ± 1% of rating or ± 2% of minimum rating
		4~20mA output : ± 5%
Time delay	Start	1-200 seconds
	Operation	1-60 seconds
Auxiliary contacts		6 contacts (3A / 250VAC at resistive load, power type based)
	Contact minimum load	10mA / 5VDC
ZCT input		Basic installation of built-in ZCT External ZCT (200mA/1.5mA, universal ZCT connectable)
I/O assured voltage	110V Type	63V ±10%
	220V Type	140V ±10%
Environment	Operation Temp.	-10~55°C
	Storage Temp.	-20~70°C
	Humidity	RH 80% or under (non-condensing)
Insulation resistance		100MΩ/500VDC
Lightning impulse voltage		1.2 × 50µs 5kV standard waveform applied
Fast Transient		2kV/1Min
Power consumption		5W or under

Model numbering system

MMP	C	B	10	220

	Function		Communication		Current Rating		Control Power
C	Current	B	Non	10	0.5 ~ 10A	220	AC 220V
S	Selective Ground Fault	M	RS485 & A420	100	5 ~ 100A	110	AC 110V
P	Power						
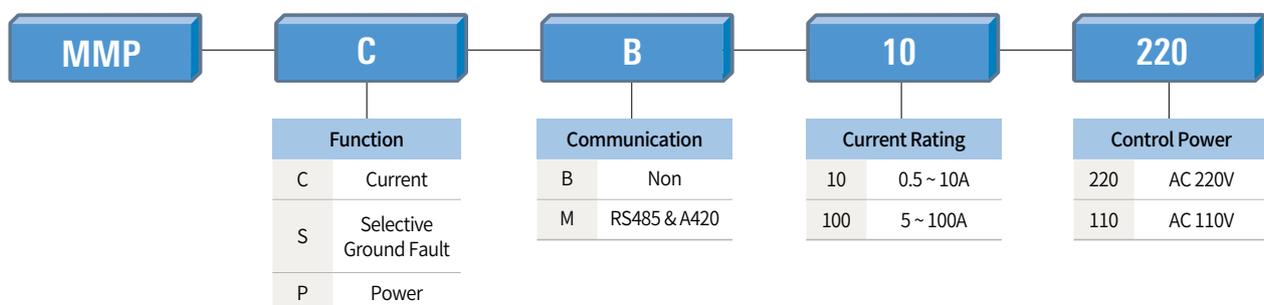

Operation and Setting

Before starting the motor, proceed as follows :

**1. Connect the display unit to the main unit of the device and then turn on. Verify that Power LED is switched on and the measurement screen is displayed.**

1) Verify the operations of ON, REVand STOP keys which are used to control motor starting. Press ON key and then the red LED above the key is switched on and motor on signal is issued . Press STOP key and then the green LED above the key is switched on and motor on signal is stopped .
   Note) REV key is activated when the motor control is set to reverse starting mode.

2) Verify the operations of a mode control key. Each time pressing L / R key the control mode changes : MCC → AUTO → REMOTE → COM

3) When the device is booted up the measurement screen is display by default. Pressing Enter key allows to access the modes : Group → Menu → Setting value. Press Esc key to return to the previous mode.
   Use Up & Down keys to change values in the screens of Measurement, Group, Menu, Setting. When the relay / alarm operates press Reset key to reset.
   Note) refer to a manual for the details.
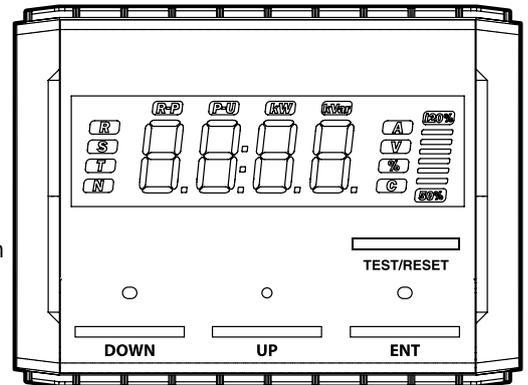

2. Verify the operations of Test function and Reset key through trip.

1) Verify the wiring first. Press Enter key to access Group menu, and use Up / Down keys to access B Group as shown "b-gr" and press Enter to access Menu with displaying "1.Loc". Use Up / Down keys to access "6.r-p" which denotes Phase reveral menu, and press Enter to access "CHEC" which denotes Setting value, and press Enter to view current wiring information.
   Note) 1. The phase information is displayed only when current is applied. If there is no current "---" is displayed.
   2. Voltage wiring information is available via "c-gr" (C group) → "8.urp" (Voltage phase reveral settings) → "CHEC" → Pressing Enter Key. The phase information is available when a voltage is applied.

2) Turn on the motor and access "d-gr" which denotes D group and move to " $t t E 5 t$ " menu using Up / Down keys and press Enter to access Fault items. Select the desired Fault item and press Enter to trip the device.

3) Press Reset key to reset the device and return to the measurement screen.
   Note) In the first access to change a parameter "P-99" for password input is displayed. Press Up key to change it to "P-00" and press Enter and then Setting change is allowed. If there is no input for 2 minutes it returns to the measurement screen.

3. Check the settings.

1) At normal state pressing Enter key access mode "A-gr" which enables setting. Select the desired group using the Up / Down keys and press Enter key to enter the desired group. To enter previous mode, press the Esc key.

2) The desired group displays from No. 1 menu. Select the desired menu using the Up / Down keys and press Enter key to enter the setting mode. To enter previous mode, press the Esc key.

3) Press Up / Down keys in the setting screen and then "P-99" is displayed. Press Up / Down keys to change the password to "P-00" and press Enter to release it. After that select the desired value and press Enter to save the setting.
   Note) Enter the date exactly when the power is turned on for the first time or recovered after the outage.

A-group

Group	Menu	Description	Setting range	Default
A	`1.PHA`	Single-phase / 3-phase	1P/3P	3P
	`2.S-F`	Frequency	50/60	60
	`3.CHA`	Characteristics (Over Current Protection)	Off/dEF/th/n-th Note 1)	n-th
	`4.O-t`	Operating time	1~60sec (5/10/20/30/60)	60
	`5.d-t`	Time Delay	1~200sec	200
	`6.r-C`	Rated current (10, 100) Note 2)	0.5~10/5~100	10
	`7.Ctr`	CT ratio	0.25/0.5/1~200	1
	`8.drU`	Starting mode	dir/y-d/F-r/Ind/lut	dir
	`9.d-t`	Y start time (lut start time)	1~120sec (lut : 0.1~1sec)	5 (0)
	`10.Yd`	Y-D switching time	0.05/0.1/0.2	0.2
	`11.St`	Outage compensation time	Off/1~30sec	Off
	`12.Sd`	Restart time	0~300sec	0

Note) 1. Operating characteristic th denotes inverse-time curve with thermal-memory and n-th denotes inverse-time curve without thermal-memory .

2. For the 100A type there is no CT ratio as it is fixed as 1.

3. Some menu are not disabled depending on the related setting.

4. Phase reversal mode needs to be switched on only during test starting, or verify wiring via wiring CHEC function. it is recommended to turn off during normal running, .
(An error on phase reversal may occur due to noise.)

B-group

Group	Menu	Description	Setting range	Default	Remarks
B	`1.Loc`	LOCK	Off/200~800%	Off	
	`2.StL`	STALL	Off/150%~500%	Off	
	`3.P-F`	Phasee loss (current)	On/Off	On	✓
	`4.P-U`	Phasee unbalance (current)	Off/30~70%	Off	✓
	`5.Pdt`	Phasee loss / unbalance Time-delay	0~200sec	0	✓
	`6.r-P`	Phase reversal (current)	Off/On/CHEC Note 1)	Off	✓
	`7.Crt`	Phase reversal operation time	0.1~1.0sec	0.1	✓
	`8.U-C`	Undercurrent	Off/30~90%	Off	
	`9.Ect`	ZCT selection (PC mV, 1.5mA)	100/1.5 Note 2)	Enbd	
	`10.9F`	Ground fault (Zero-phase)	Off/0.03/0.05/0.1~3.0	Off	
	`11.9n`	Ground fault (Residual current)	Off/30~100%	Off	✓
	`12.9t`	Ground fault operation time	0.05~3.0sec	3.0	
	`13.9r`	Selective ground fault(SGR) current setting	Off/0.03/0.05/0.1~3.0	Off	
	`14.9U`	Selective ground fault(SGR) voltage setting	8~80V	80	
	`15.9A`	Selective ground fault(SGR) reference angle setting	0~90 angular measure	0	
	`16.9t`	Selective ground fault(SGR) operating time	0.05~3.0sec.	3.0	
	`17.9d`	Ground fault Time-delay(Ground fault, SGR)	0~200sec	60	
	`18.IC`	Instantaneous protection	Off/500~5000%	Off	
	`19.AL`	Output contact method	I-tp, ALo, U-C, OrH	I-tp	
	`20.Ar`	Current Y / N, Alarm	On/60~110%	On	
	`21.o9`	Ground fault Overvoltage	Off/8~80V	Off	
	`22.ot`	Operating time	0.05~3.0sec	3.0	
	`23.rY`	Relay output selection	u-AL, AtP	u-AL	
	`24.th`	THD (voltage)	0~100%	Unit : %	

Note) 1. If CHEC set value of reverse phase is selected, wiring information additionally appears.

2 ZCT is selected differently depending on whether to use our product or other universal products.

3. Error assurance range 10A type: ~100A / 100A type: 50Hz~600A, 60Hz~720A

4. I-tp: Instantaneous trip, circuit breaker trip(interaction), Alo: instantaneous alarm, U-C: in case of low-current operation, OrH: if a motor's continuous operating time is higher than a set value
In case of ALL setting, when all current relay factors (including I-tp) work, output (AUX-C3) appears.

5. No support is given for a single-phase motor.

Operation and Setting

	`7.FL t`	Fault cause check [note 3]	1. The most recent	-
			2. The 2nd. recent	
			3. The 3rd. recent	
			4. The 4th. recent	
			5. The 5th. recent	
	`8.A - r`	Automatic reset time	OFF / 1~20m	Off
	`9.r - n`	Automatic reset number	Off/1~5	Off
		Set number of times		
	`10.Ad`	Communication address [note 4]	1~247	247
	`11.b5`	Communication speed [note 4]	9.6/19.2/38.4K	9.6K
	`12.5P`	Swap [note 4]	On/Off	Off
	`13.Pr`	Parity setting [note 4]	nonE/odd/EUEn	nonE
	`14.td`	20mA setting [note 4]	0.5~10/5~100	10/100
	`r5t`	Stored data deletion	All : for all subparameters	-
			A-P : active energy	
			rA-P : reactive energy	
			trt : total running time	
			CCC : contactor counter	
			CALo : calories	
			FALt : fault events	
	`tESt`	Operation test	o-L : overcurrent test	-
			o-U : overvoltage test	
			g-F : ground fault test	
			I-C : instantaneous test	

Note) 1. The contactor operation is counted up to 65000cycles and then initialized.
2. The date setting can be stored after filling up month, day, hour and minute.
3. The trip cause can be stored up to 5 recent events and then the oldest event is deleted first.
4. 10.Ad, 11.bs, 12.SP, 13.Pr, 14.td are available for communication type products.
5. Data clear and test can be inputted in the normal state, and test items can be viewed while a motor is switched on.

Operation and Setting

4. Up & downloading of all settings once (Quick setup)

1) Press Up and Enter keys at the same time at the status of normal, MCC mode and motor stop,
   then "UPLd" begins to flash on the screen which denotes the setting values of the device are being uploaded in the display unit
   and "U.END" is displayed when completed. Press Enter key to return to the measurement screen.

2) After installing the uploaded display unit onto the device that is not set yet, press Down and
   Enter keys at the same time at the status of normal, MCC mode and motor stop,
   then "dnLd" begins to flash on the screen which denotes the setting values of the display unit
   are being downloaded in the device and "d.END" is displayed when completed.
   Press Enter key to return to the measurement screen.
   Note) 1. Up & downloading is available between the same models. If the models are different each other an error occurs with "d.Err" message.
   　　　 2. Up & downloading of date, running time and fault cause are not available.

5. Checking fault history

1) Press Esc and Enter keys at the same time in the measurement screen,
   then the most recent fault cause in #7 menu of D-group is displayed.
   Note) If there is no fault history "1.non" is displayed.

2) Use Up and Down keys to move to the desired one out of 5 fault events and select by pressing Enter key.
3) The fault current of phase R is displayed. Each time pressing the down key following informations are displayed in turn :
   fault current of phase S / fault current of phase T / overload ratio / date
4) To enter the previous mode, press Esc key.
5) Press Esc and Enter keys at the same time to return to the measurement screen.

6. Forced reset of thermal memory

Press Esc and Stop keys at the same time to make the tripped motor become a cold state by force
when operating characteristic is set to inverse-time curve with thermal-memory (th).
If a motor is tripped due to overcurrent the immediate pressing of reset key at the hot state of the motor causes immediate tripping.
To avoid it reset via pressing Esc and Stop keys at the same time which makes the motor cold state.

Fault cause information

| Screen		Fault cause	Additional information
Current	`0-L`	Overcurrent	phase, load rate, time
	`Loc`	Lock	phase, load rate, time

*Attention in panel design

1. It is required to have grounding connection with all equipment.
2. It is required to minimize wiring as most as possible.
3. After a shield-type cable is applied, it is required to ground the shield.

*If induced voltage occurs

1. It is required to add a proper capacitor in parallel depending on the parasitic capacitance of product input part.
2. If induced voltage occurs even after the capacitor is added,
   it is required to get auxiliary relay energyed in order for an input to make possible through an auxiliary contact point when a circuit is designed.

# Terminal configuration / Wiring & cable connection

Full voltage start
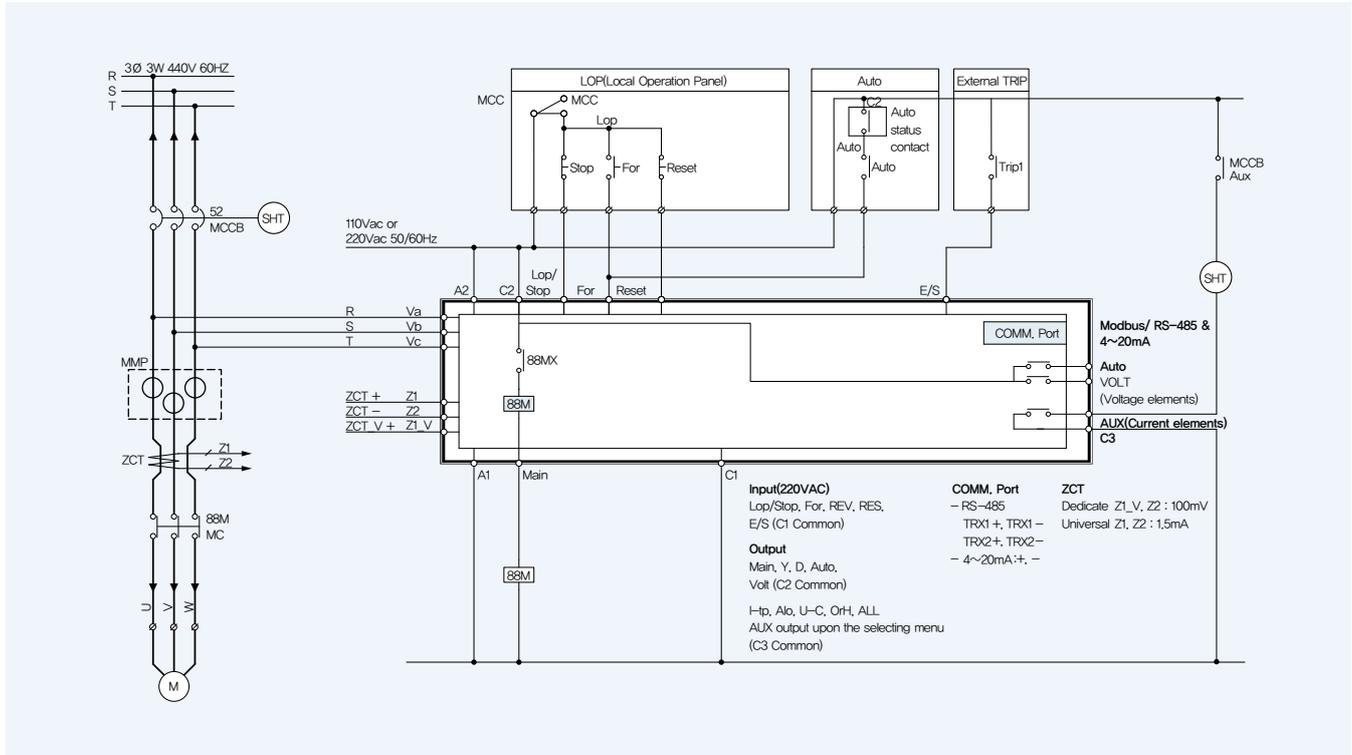

Note) In case of distance operation (LOP / AUTO), if a wiring distance is too long, induced voltage can cause malfunction. Therefore, bear in mind this point at the time of designing a panel.

Reversible operation
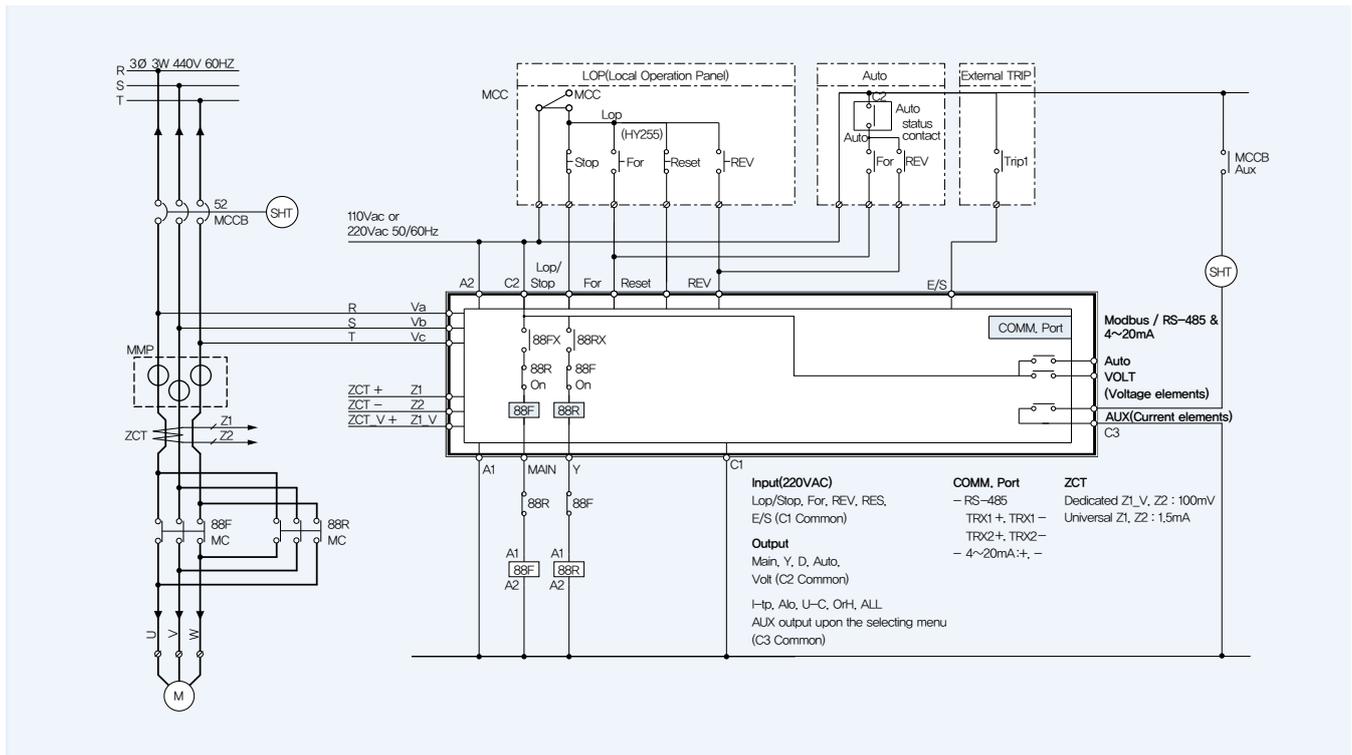

Y-D start
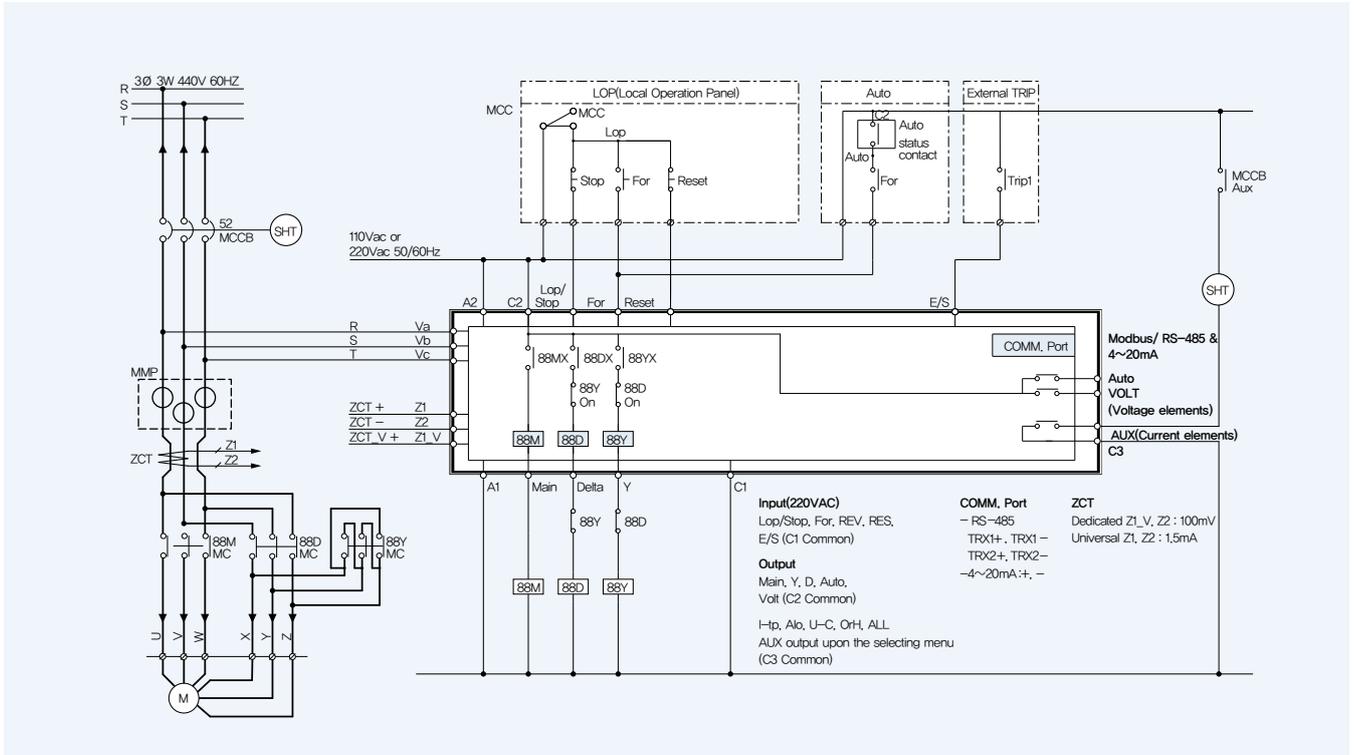

Reactor start
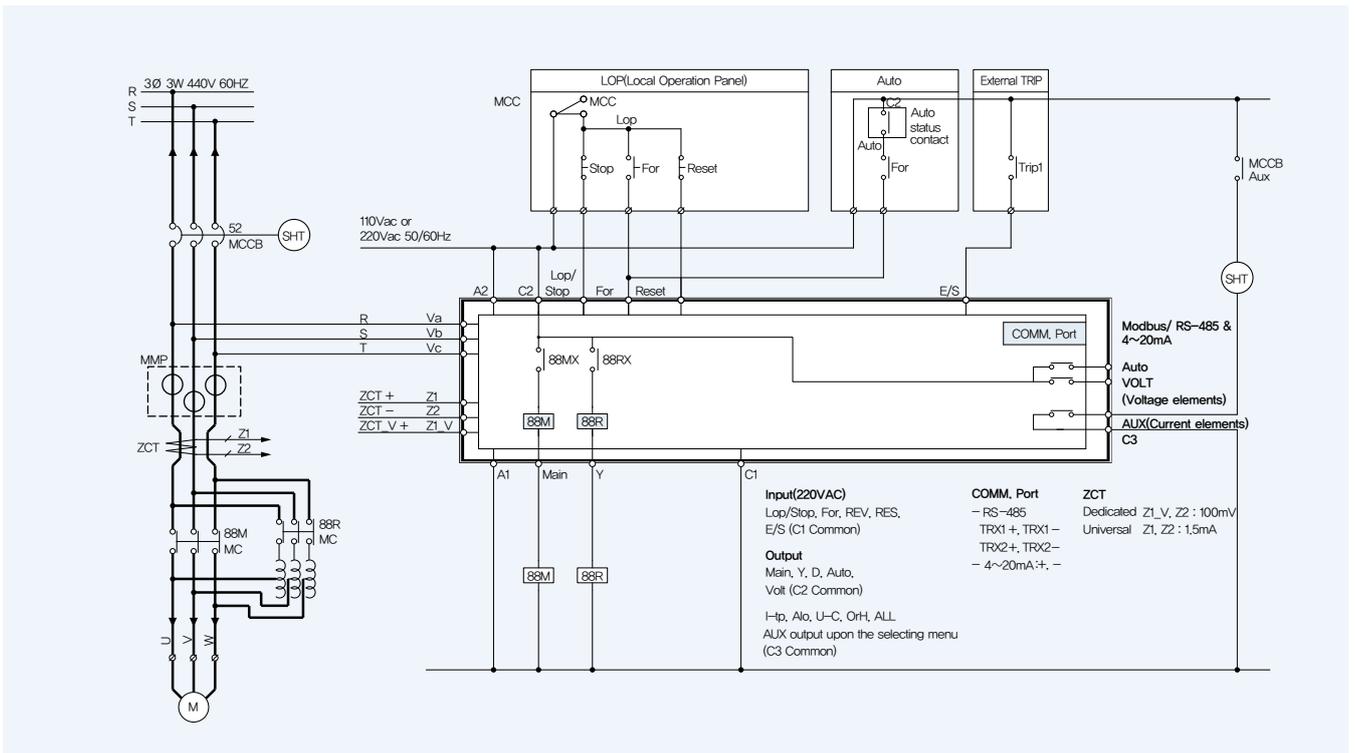

Terminal configuration / Wiring & cable connection

Irreversible full voltage starting
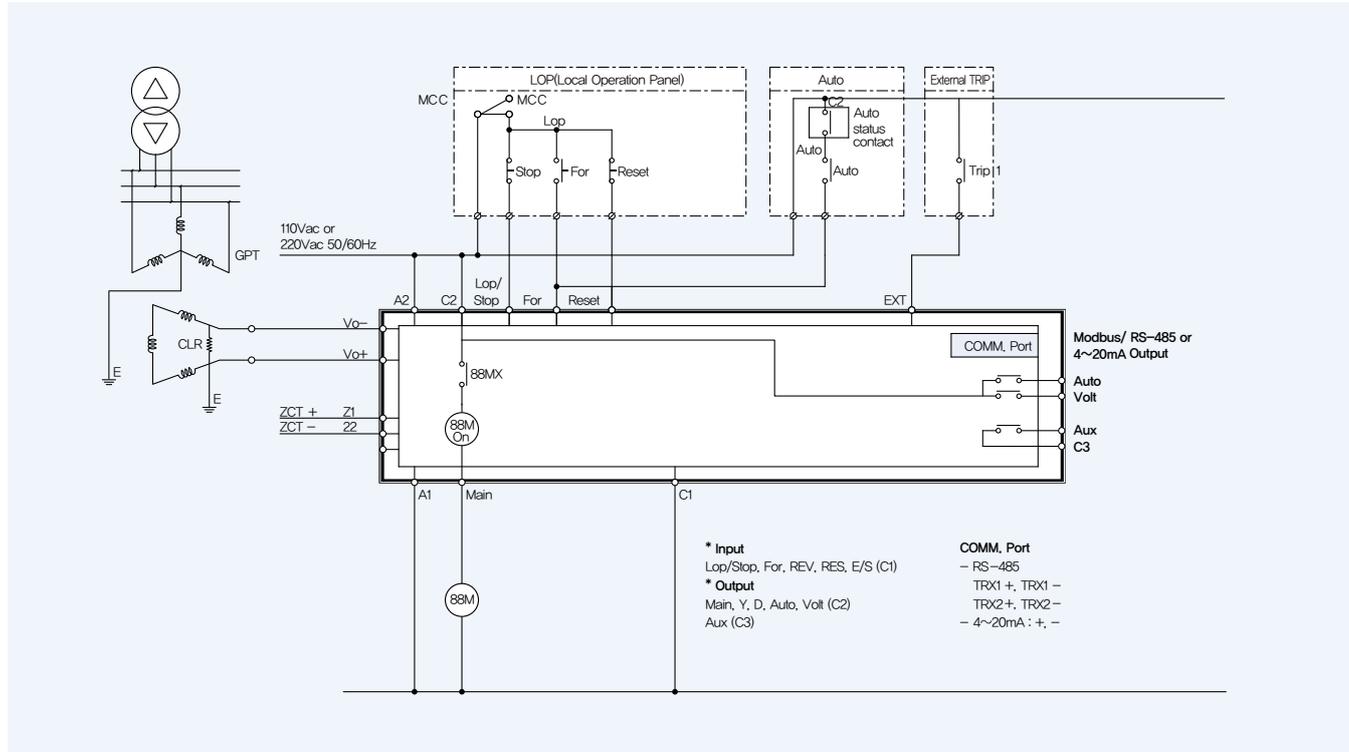

Reversible full voltage starting
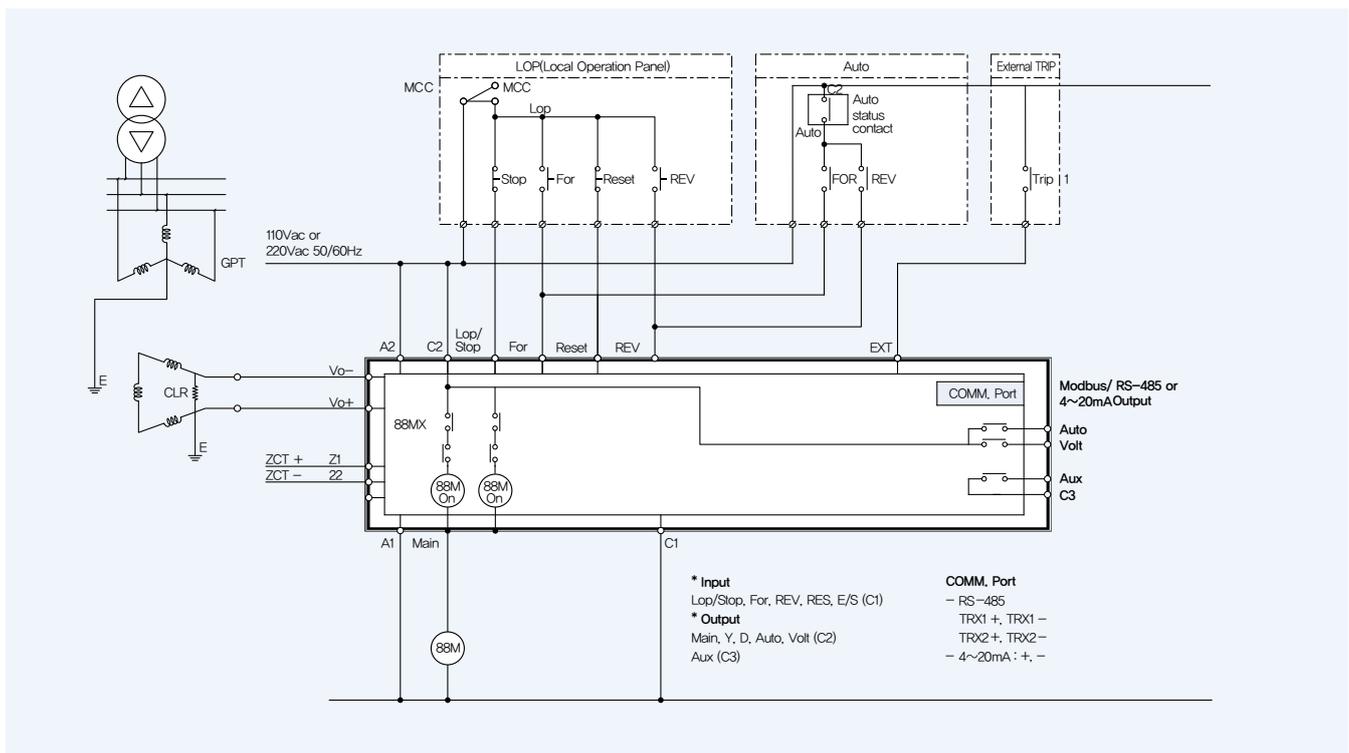

Inverter start (Current)
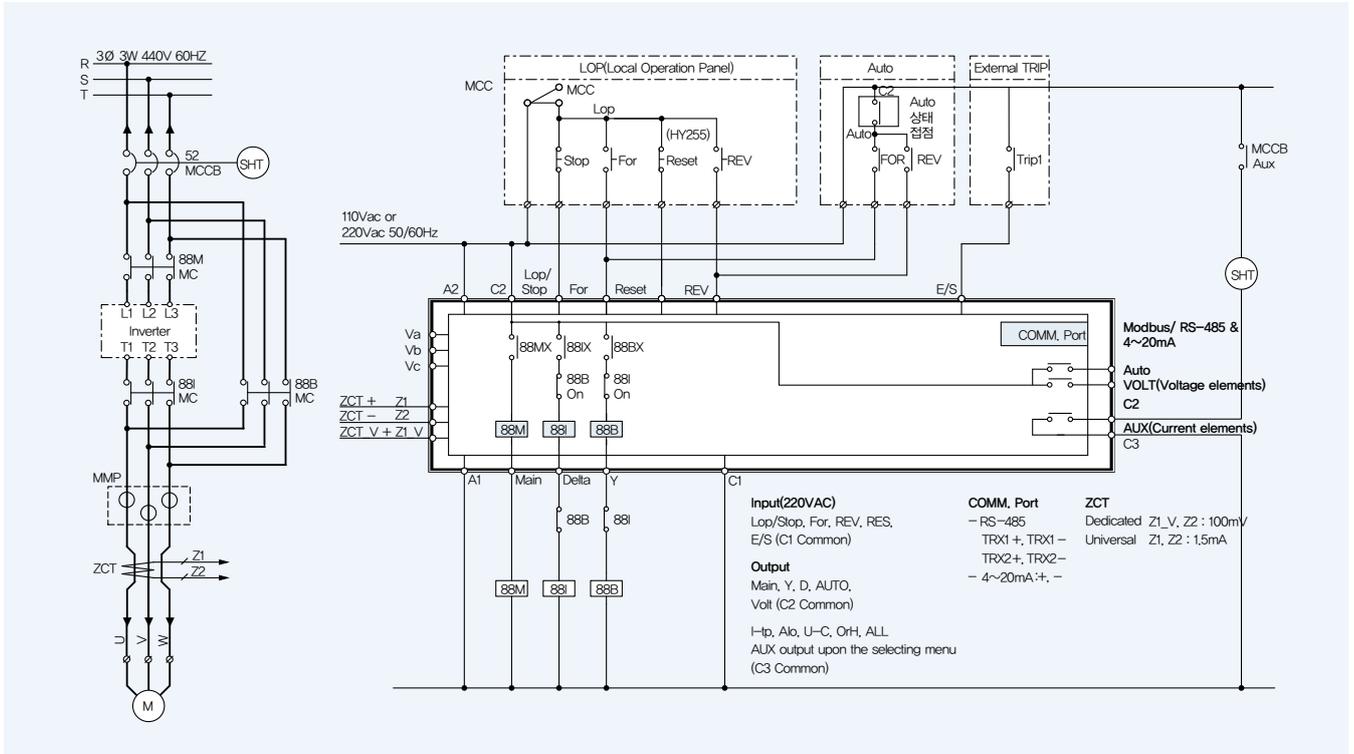

Soft starter start
